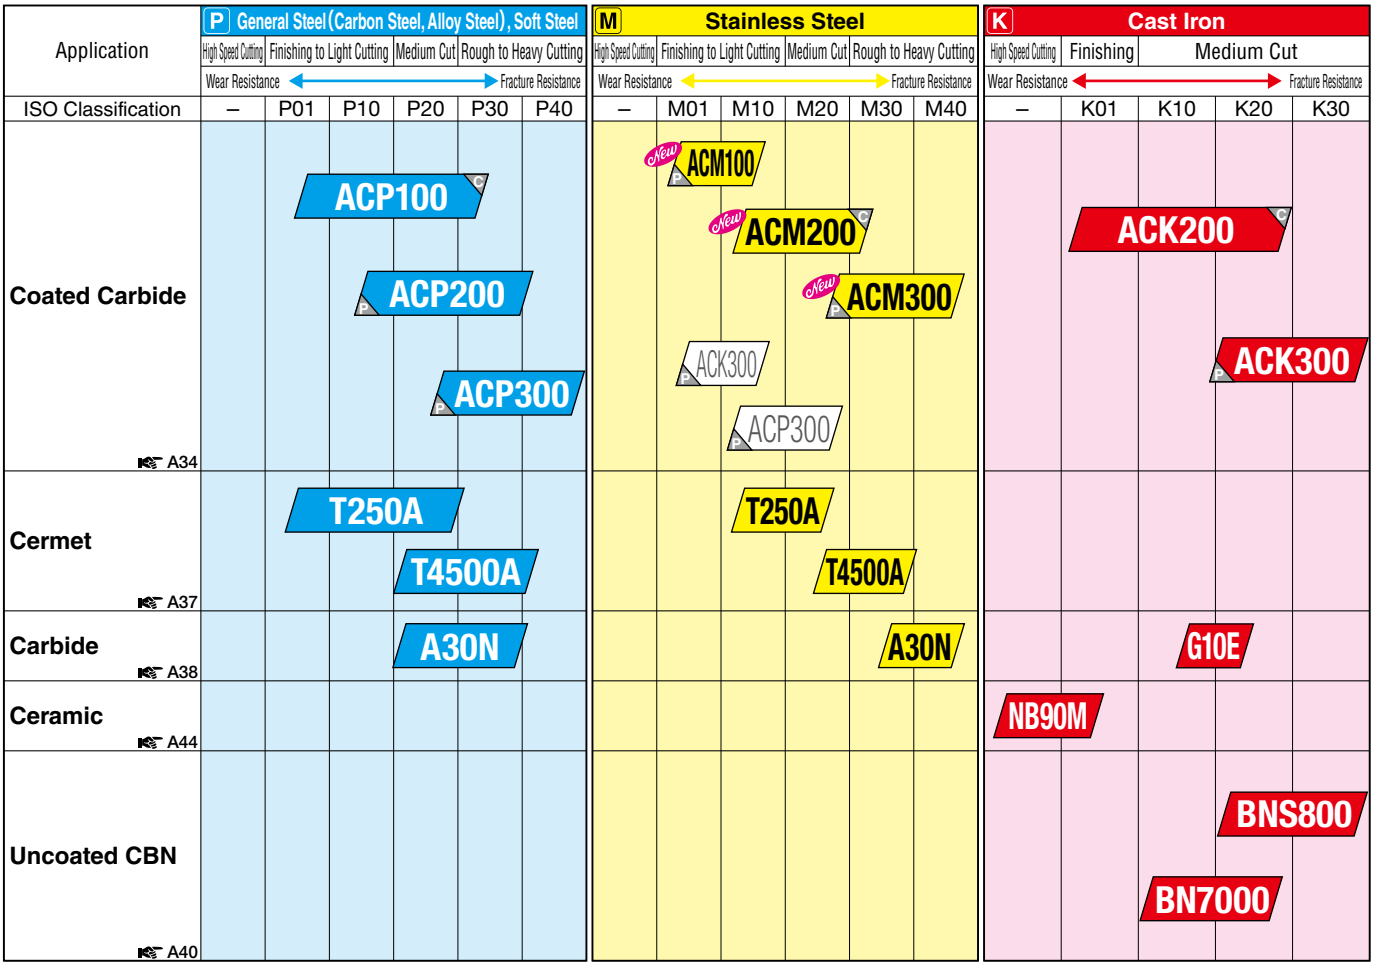
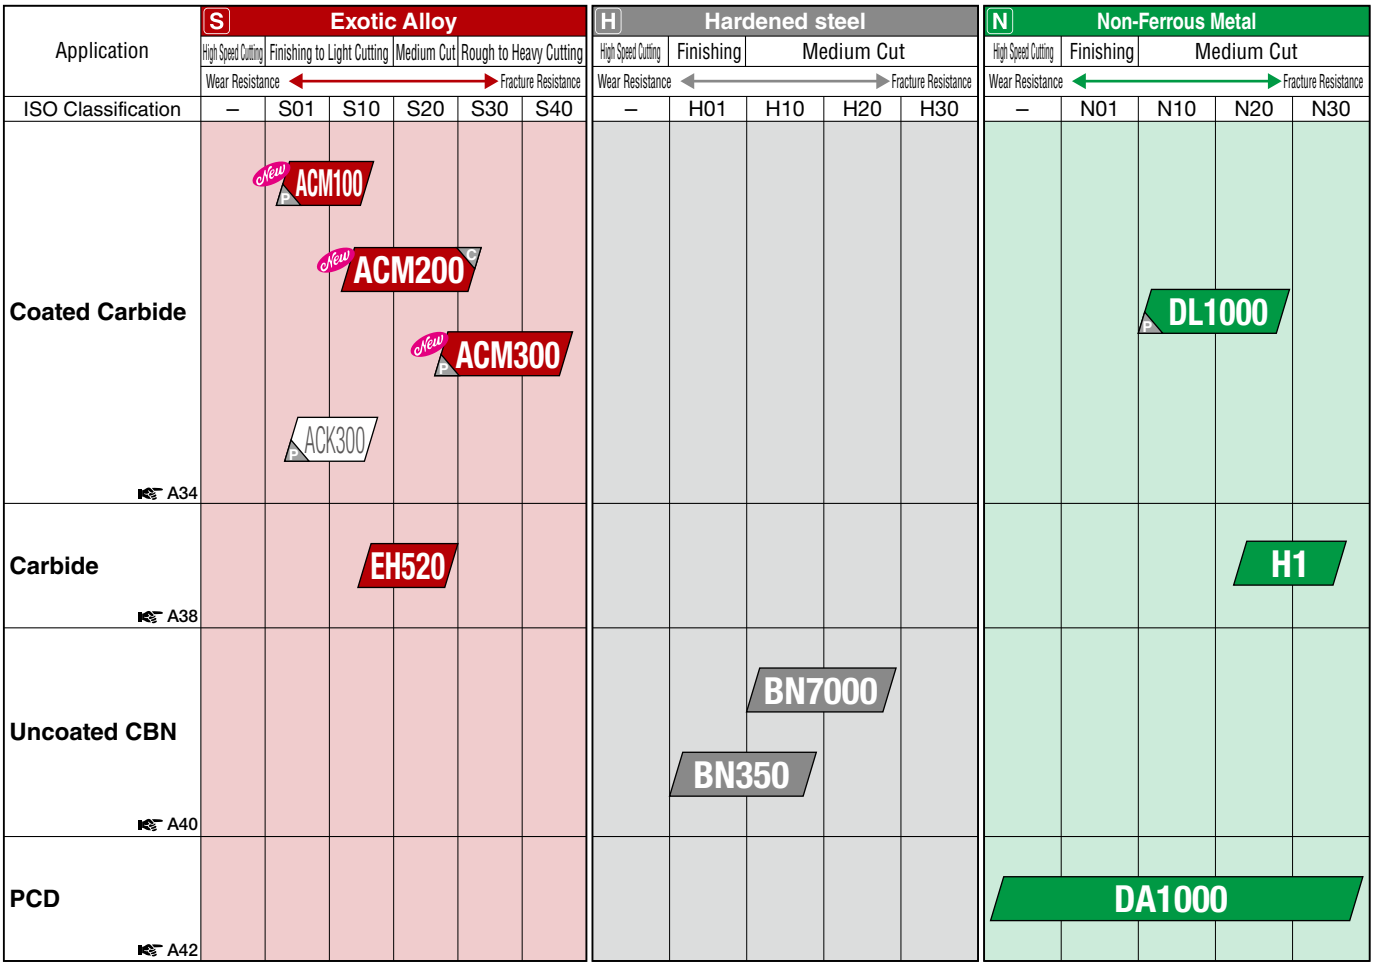
Explanation of Milling Grades

Selection of Sumitomo Grades (Milling)





: First recommended grade : Second recommended grade : CVD coating : PVD coating Blank : Non-coated

Explanation of Milling Grades

Characteristic

CVD coating

Classification	Grade	Hardness(HRA)	Toughness(GPa)	Coating Type	Coating Thickness(μm)	Characteristics	Old Grades
P Steel	ACP100	89.3	3.1	Super FF Coat	6	A grade that employs a tough carbide substrate and thin-layer Super FF Coat to provide superior thermal crack and wear resistance in high-speed milling of steel.	AC230
M Stainless steel	New ACM200	89.8	3.4	Super FF Coat	6	A grade ideal for hardened steel machining that provides excellent wear and heat resistance by employing a newly developed high strength carbide and Super FF Coating.	AC230
K Cast Iron	ACK200	91.7	2.5	Super FF Coat	6	A grade that employs a tough carbide substrate and thin-layer Super FF Coat to provide superior thermal crack and wear resistance for high-speed milling.	AC211

PVD coating

Classification	Grade	Hardness(HRA)	Toughness(GPa)	Coating Type	Coating Thickness(μm)	Characteristics	Old Grades
P Steel	ACP200	89.5	3.2	(New) Super ZX Coat	3	• General machining of general steel and die steel. • Employs PVD coating of multiple nanometre-thick layers coupled with a special tough substrate to provide a general-purpose grade with an excellent balance of fracture and wear resistance.	ACZ330
	ACP300	89.3	3.1	(New) Super ZX Coat	3	• Interrupted machining and stainless steel machining. • Employs PVD coating of multiple nanometre-thick layers coupled with an ultra-tough substrate for excellent fracture resistance.	ACZ350
M Stainless steel	New ACM100	91.4	3.3	(New) Super ZX Coat	3	• A grade that provides excellent wear resistance by employing high strength fine-grained carbide and New Super ZX Coating.	ACZ310
	New ACM300	89.8	3.4	(New) Super ZX Coat	3	• The first recommended grade for stainless steel machining that achieves a good balance between wear resistance and fracture resistance by employing our newly developed high strength carbide and New Super ZX Coating.	—
K Cast Iron	ACK300	91.4	3.3	(New) Super ZX Coat	3	• General to interrupted machining of cast iron and ductile cast iron. • Employs PVD coating of multiple nanometre-thick layers coupled with a fine-grained super tough substrate for excellent fracture resistance.	ACZ310
N Non-Ferrous Metal	DL1000	92.9	2.1	AURORA Coat (DLC Coat)	0.5	• For machining aluminium alloy, copper alloy, and other non-ferrous metals, and resin. • DLC coat with low friction coefficient and excellent adhesion resistance.	—

Cermet

Classification	Grade	Hardness(HRA)	Toughness(GPa)	Coating Type	Coating Thickness(μm)	Characteristics	Old Grades
P Steel	T1500A	92.0	2.2	—	—	A general purpose grade that employs a substrate with improved balance of fracture and wear resistance to deliver superior finished surfaces in a wide variety of cutting conditions.	T1200A
M Stainless steel	T250A	91.4	2.1	—	—	Tough cermet grade with enhanced crack spread resistance.	—
	T4500A	91.0	2.3	—	—	Cermet grade with excellent fracture resistance and reduced occurrence of thermal cracking.	—

CBN Layer

Classification	Grade	Binder	Content(%)	Grain Size(μm)	HardnessHV(GPa)	Toughness(GPa)	Main Coating Components	Coating Thickness(μm)	Characteristics
K Cast Iron	BN7000	Co Alloy	90 to 95	2	41 to 44	1.30 to 1.40	—	—	Improved wear and fracture resistance in rough cutting of cast iron and exotic alloy.
	BNS800	Al Alloy	85 to 90	8	39 to 42	0.95 to 1.10	—	—	Grade with 100% solid CBN structure and excellent thermal shock resistance.
	BN500	TiC	65 to 70	6	32 to 34	1.00 to 1.10	—	—	Optimised for cast iron cutting. Provides superior wear and fracture resistance.
H hardened steel	BN350	TiN	60 to 65	1	33 to 35	1.20 to 1.30	—	—	High cutting edge strength, suited to heavy interrupted cutting.

Polycrystalline Diamond

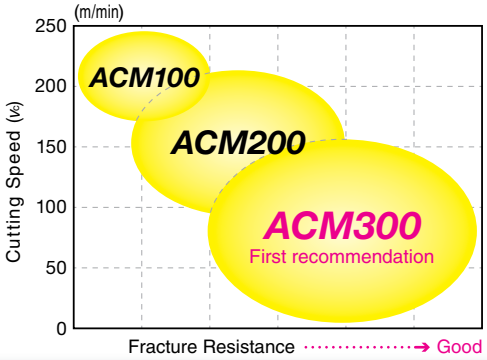
Classification	Grade	Binder	Content(%)	Grain Size(μm)	HardnessHV(GPa)	Toughness(GPa)	Characteristics
N Non-Ferrous Metal	DA1000	Co	90 to 95	Up to 0.5	110 to 120	≈ 2.60	High density sintered material made of ultra-fine diamond particles that demonstrates optimum wear and fracture resistance, and excellent edge sharpness.

Carbide ☞ A38

Ceramic ☞ A44

ACM Series

New



Grade

New ACM100

A PVD grade that provides excellent wear resistance by employing high strength, fine-grained carbide and our new Super ZX Coating.

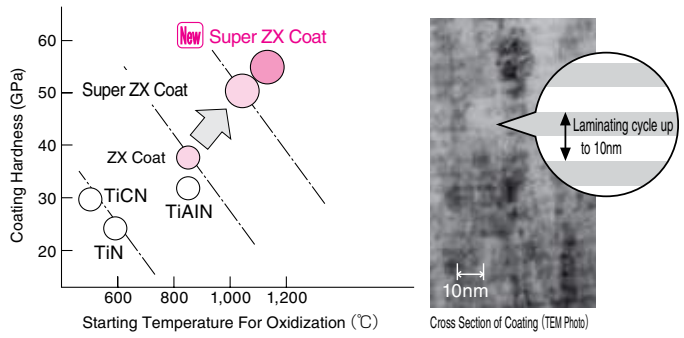
New ACM200

A CVD grade ideal for hardened steel machining that provides excellent wear and heat resistance by employing a newly developed high strength carbide and Super FF Coating.

New ACM300

The first recommended PVD grade for stainless steel machining that achieves a good balance between wear resistance and fracture resistance by employing newly developed high strength carbide and our new Super ZX Coating.

Characteristics



NEW Super ZX Coat

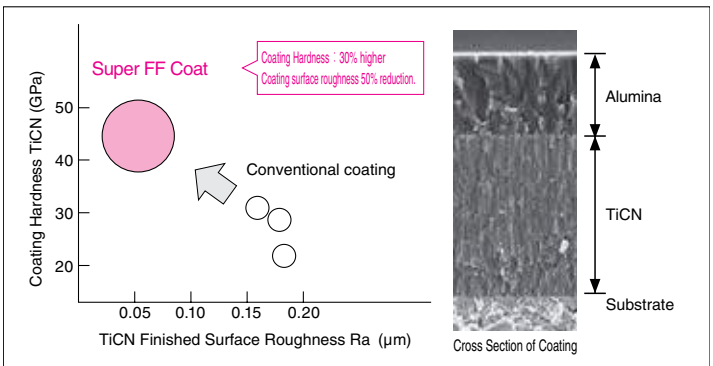
(PVD : **P**hysical **V**apor **D**eposition)

ACM100 / ACM300

Compared to conventional PVD grades, the coating hardness has been increased by 40% and the oxidization starting temperature has been increased by 200°C.

High speed, high efficiency machining of more than 1.5 times that of conventional grades is possible by reviewing the coating layer composition to drastically improve the adhesion resistance.

Achieves over 2 times longer tool life compared to conventional grades under the same cutting conditions.



Super FF Coat

(CVD : **C**hemical **V**apor **D**eposition)

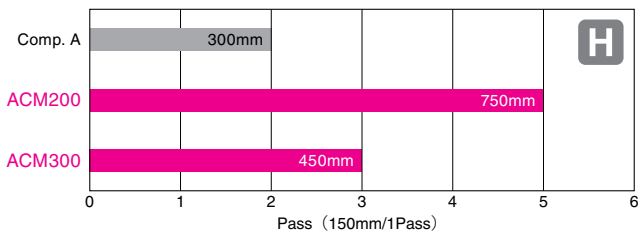
ACM200

Achieves excellent adhesion and chipping resistance thanks to the smoothness of CVD coating as well as our coating stress control technology.

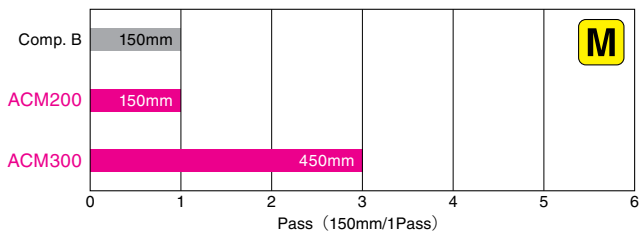
High speed, high efficiency machining of more than 1.5 times that of conventional grades is possible by refining and hardening the coating layer.

Achieves over 2 times longer tool life compared to conventional grades under the same cutting conditions.

Performance

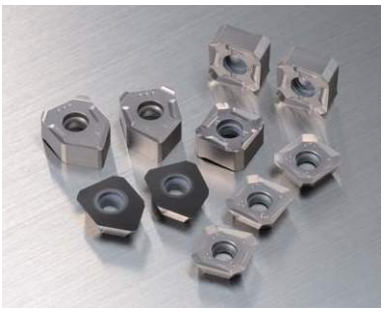


Work Material : SUH660 Tool : **WGX13100R (SEMT13T3AGSR-G)**
Cutting Conditions : v_c=**150**m/min, f_z =**0.15**mm/t, a_p=**1.0**mm, a_e=**60.0**mm, Wet



Work Material : SUS316L Tool : **WEX3032E (AXMT170508PEER-E)**
Cutting Conditions : v_c=**150**m/min, f_z =**0.15**mm/t, a_p=**2.0**mm, a_e=**20.0**mm, Wet

T4500A



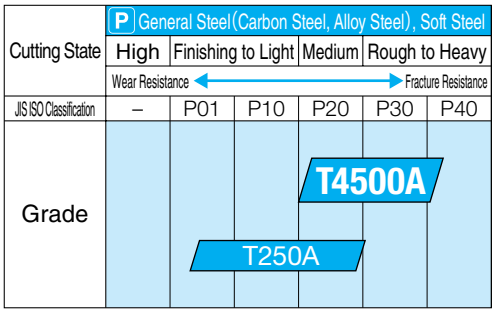
A general-purpose cermet grade that provides both wear and fracture resistance with higher-quality finished surfaces.

T4500A is an uncoated cermet grade for milling that puts emphasis on toughness and is suitable for copper machining.
T4500A enables stable finishing thanks to its excellent cutting edge strength and thermal shock resistance.

Characteristics

- Provides excellent cutting edge strength and fracture resistance.
- Achieves excellent thermal shock resistance and longer, stable tool life.
- Provides beautiful surface finish unique to cermet.

ApplicationRange



Recommended Cutting Conditions

ISO	Work Material	Hardness	Cutting Speed v_c (m/min) Min. - **Optimum** - Max.	Feed Rate f_z (mm/t) Min. - **Optimum** - Max.
P	Soft Steel	≤180HB	150-**225**-300	0.10-**0.20**-0.30
	Alloy Steel	180 to 280HB	120-**185**-250	0.10-**0.20**-0.30
	Carbon Steel	180 to 280HB	120-**185**-250	0.10-**0.20**-0.30

Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth, and other factors.

* Exceptions

The above table does not apply to the following insert codes: SPCH42TR, SPCH42R, SPCH53TR, SPCH53R, SDKN42MT, SDKN42M, SDKN53MT, SDKN53M, SEKN42MT, SEKN42M, SEKN53MT, and SEKN53M.

Explanation for the above exceptions:

- Although "H" and "K" indicate precision tolerances, the insert peripheral is not ground.
- "M" in this instance represents "Neutral Hand" insert.
- "T" in this instance represents "negative land" edge treatment.
- "R" indicates the feed direction (Right Hand).

WGX Type

Expansion

General Features

SEC-WaveMill WGX Type employs unique chipbreaker design to provide lower resistance and higher-quality surface finishes than conventional tools.
Lineup of chip grades and chipbreakers has been significantly expanded, and employment of the New ACM series enables machining of stainless steel and exotic alloys.

Characteristics

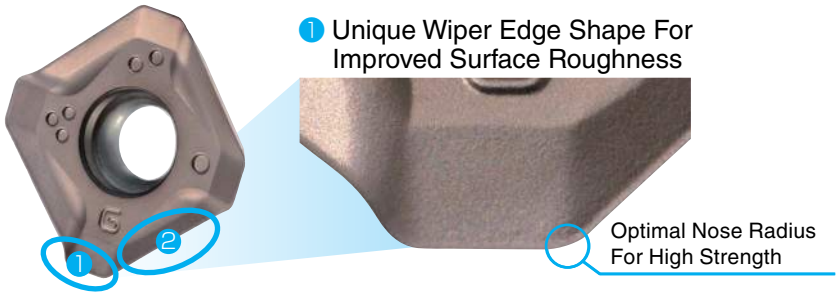
● Less cutting force
- The high-rake chipbreaker designed for use with the WGX type achieves low cutting resistance.

● High Quality
- Improved run-out precision and unique wiper edge shape ensure excellent surface finish quality.
- Addition of chamfer reduces burrs and edge chipping.

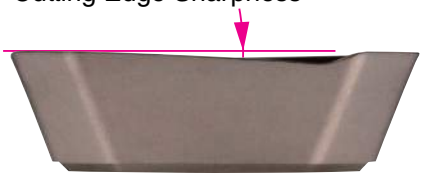
● New Grade Coating
- Features high-precision technology that reduces insert run-out variation and a new coating to provide stable and long tool life.
- The new New ACM200 and New ACM300 grades for exotic alloy machining further expand the range of applications.

Insert Shape Characteristics

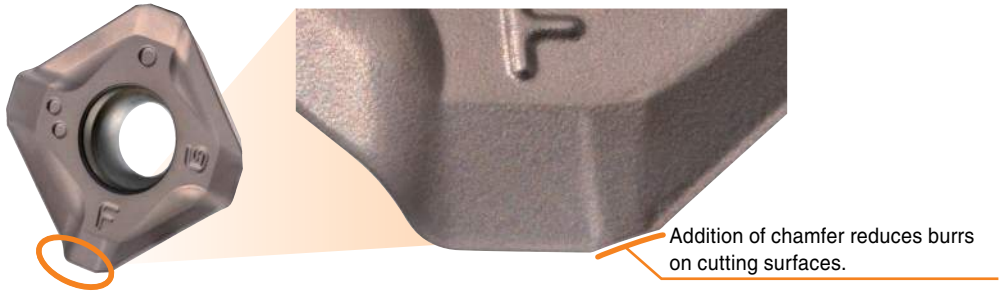
● General-purpose G Type Chipbreaker



2 Large Rake Angle And Cutting Edge Rake Angle Improves Cutting Edge Sharpness



● Low-Burr Design FG Type Chipbreaker



Series

Type	Cat No.	Cutter	No. of Teeth	Cutter Mounting
Standard Pitch	WGX13000R(S)	ø40 to ø250	3 to 10	Imperial/Metric
Fine Pitch	WGXM13000R(S)	ø50 to ø250	4 to 14	Imperial/Metric
Extra-Fine Pitch	WGXF13000R(S)	ø50 to ø250	5 to 24	Imperial/Metric
Endmill Type	WGX13000EW	ø32 to ø63	3 to 5	Metric

Sizes of ϕ125mm and below have oil holes

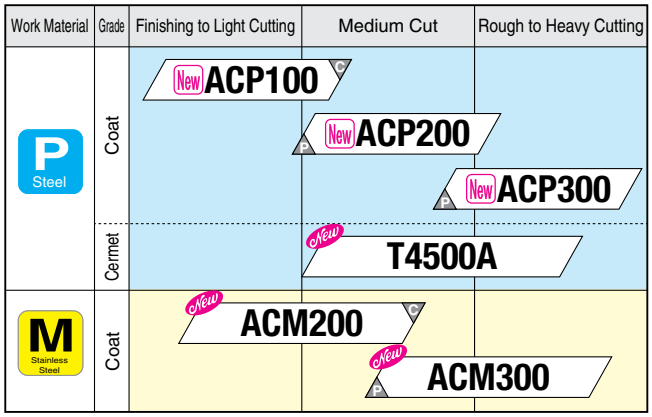
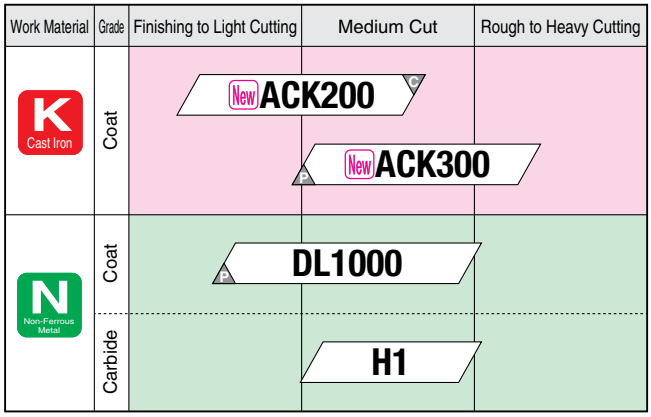
WGXM 13000R(S) Fine Pitch
WGXF 13000R(S) Extra-Fine Pitch
WGX 13000EW Endmill Type

Application Range





The letters "C" and "P" at either end of each grade indicate coating type. C: CVD P: PVD Blank: Non-coated

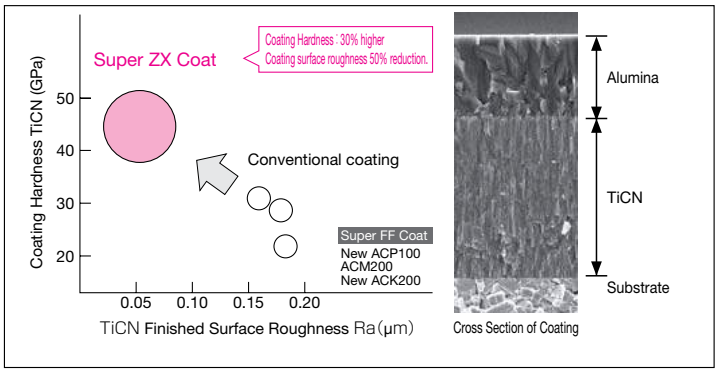
Features of Coating

C Super FF Coat (CVD : Chemical Vapor Deposition)

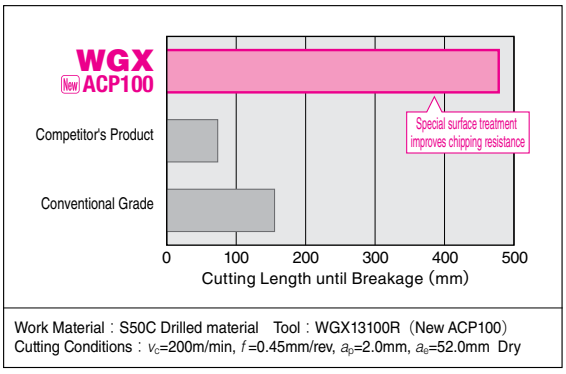
Provides excellent wear resistance and high reliability thanks to our coating stress control technology and the ultra-fine coating particles of the Super FF Coat achieved through our proprietary CVD process technology.

- ▶Achieves excellent chipping resistance thanks to the smoothness of the coating and our coating stress control technology.
- ▶High speed, high efficiency machining of more than 1.5 times that of conventional grades is possible by hardening the coating layer.
- ▶Achieves over 2 times longer tool life compared to conventional grades under the same cutting conditions.

Characteristics of films



Fracture Resistance



Work Material : S50C Drilled material Tool : WGX13100R (New ACP100)
Cutting Conditions : v_c=200m/min, f=0.45mm/rev, a_p=2.0mm, a_e=52.0mm Dry

P NEW Super ZX Coat/Super ZX Coat (PVD : Physical Vapor Deposition)

Employs our new Super ZX Coat, which utilizes our proprietary thin-layer coating technology and advanced nanotechnology. The coating consists of thousands of alternating, nanometer-level-thin (1 nanometer is 1 billionth of a meter) layers.

- ▶Compared to conventional grades, the coating hardness has been increased by 40% and the oxidization starting temperature has been increased by 200°C.
- ▶High speed, high efficiency machining of more than 1.5 times that of conventional grades is possible.
- ▶Achieves over 2 times longer tool life compared to conventional grades under the same cutting conditions.

Cutting Surface Comparison

Work Material	FG Type	G Type	Conventional Grade	Competitor's Product
S50C	○ 	○ 	○ 	× 
SUS304	○ 	○ 	× 	× SCM440	○ 	× 	× 	× 
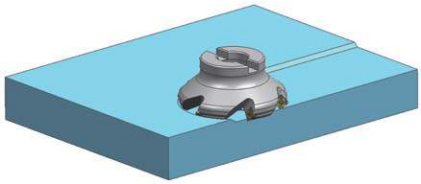
Machine : M/C BT50 Tool : WGX13100R (ø100) Grade : ACP200
Cutting Conditions : v_c=200m/min, f_z=0.2mm/t, a_p=3.0mm, a_e=80mm Dry

■ Application Examples

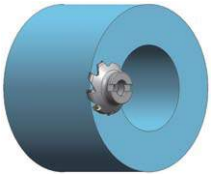
● SCM420 Block material

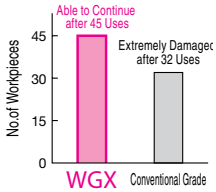


Surface roughness greatly improved compared to competitors' products.
Superior cutting edge and reduced cutting resistance. Stable cutting can be performed with a low load.

Tool : WGX13125R (ø125) Insert : SEMT13T3AGSR-G (ACP200)
Cutting Conditions : v_c=220m/min, f_z=0.25mm/t, a_p=2.0mm, a_e=125mm Dry

● ST-52 Pipe Steel

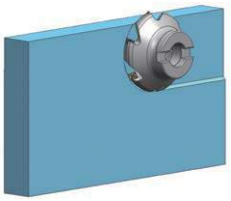




In contrast to conventional grades, which are heavily damaged after 32 uses per corner, WGX has little damage after 45 uses per corner and can continue cutting thereafter.

Tool : WGXM13125R (ø125) Insert : SEMT13T3AGSR-G (ACP200)
Cutting Conditions : v_c=300m/min, f_z=0.12mm/t, a_p=4.0mm, a_e=100mm Wet

● SS400 Machine Component



For low-rigidity machines, chattering occurred with conventional tools, but WGX reduces chattering. WGX also reduces the occurrence of exit burrs.

Tool : WGX13125R (ø125) Insert : SEMT13T3AGSR-FG (ACP200)
Cutting Conditions : v_c=200m/min, f_z=0.2mm/t, a_p=1.0mm, a_e=100mm Wet

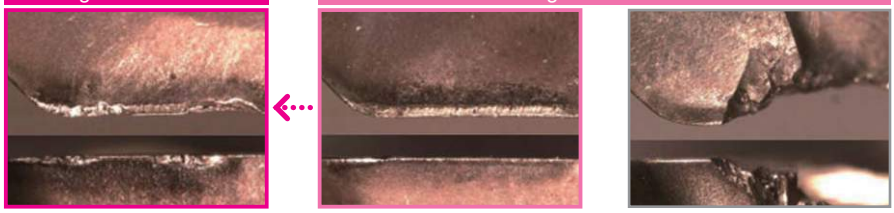
● SCM440 Machine Component

In heavy interrupted cutting of porous plates, WGX achieves a longer tool life with no breakages and a more favorable surface roughness than our competitors' products.

Tool : WGC13080R (ø80) Insert : SEMT13T3AGSR-H (ACP200)
Cutting Conditions : v_c=200m/min, f_z=0.15mm/t, a_p=3.0mm Dry

● SUS304 Machine Component

Cutting Distance : 8.25m | Cutting Distance : 3.75m



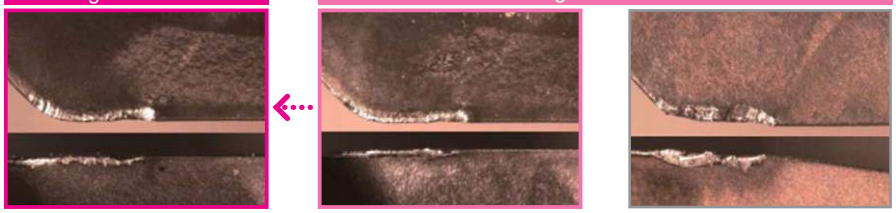
WGX WGX Competitor's Product

PVD coating, which has high hardness and excellent oxidation resistance, provides stable tool wear and a tool life that is over 2 times longer than that of our competitors.

Tool
Cutter : WGX13100RS (ø100)
Insert : SEMT13T3AGSR-G (ACM300)
Cutting Conditions : v_c= 150m/min
f_z = 0.15mm/t
a_p= 2.0mm
a_e= 20.0mm Dry

● SUS630/H900 Machine Component

Cutting Distance : 15m | Cutting Distance : 7.5m



WGX WGX Competitor's Product

The high wear resistance of CVD coating provides stable tool wear and a tool life that is over 2 times longer than that of our competitors.

Tool
Cutter : WGX13100RS (ø100)
Insert : SEMT13T3AGSR-G (ACM200)
Cutting Conditions : v_c= 150m/min
f_z = 0.1mm/t
a_p= 1.0mm
a_e= 75.0mm Dry

● S50C Machine Component

Stable cutting is achieved even with low-rigidity machines.

Inserts are not included. Check the collet attachment size (ød) when selecting the cutter. Sizes ø160 mm or above do not have coolant holes.

*Please use JIS B1176 hexagonal bolt (ø80: M12x30 to 35mm, ø100: M16x40 to 45mm) for securing ø80/ø100 cutter to the arbour.

DGC Type

Expansion

General Features

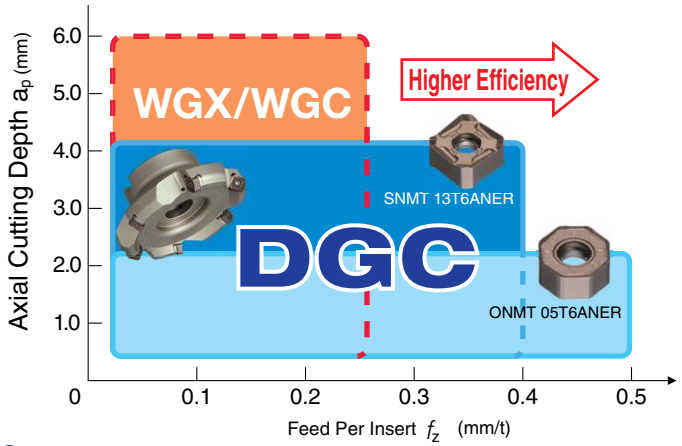
SEC-Sumi Dual Mill DGC type employs double-sided inserts with up to 16 corners for excellent economy. This is a general-purpose cutter featuring high cutting edge strength for high efficiency milling and a low-burr chipbreaker design that provides high quality machined surfaces.

DGC type insert line up includes double-sided SNMT and ONMT types.
Up to 16 corners can be used for improved economy.

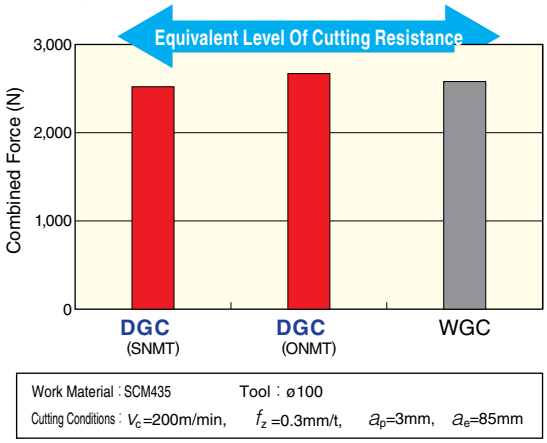
Characteristics

● Achieves level of cutting edge sharpness and machined surface quality equivalent to single-sided insert cutter at a maximum cutting depth of a_p=3mm or shallower.

●Recommended Cutting Conditions For General Steel Milling

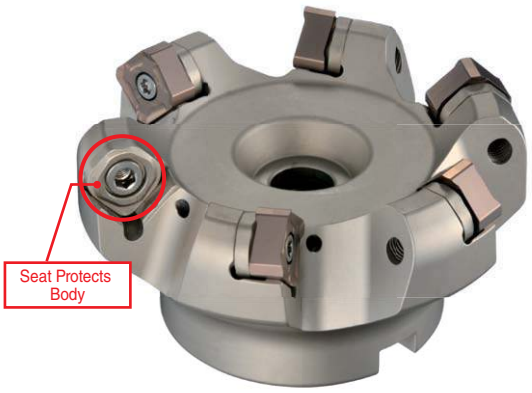


●Cutting Resistance Comparison



● **Dual-Purpose Body Characteristics**

Two types of inserts can be used with a single body depending on milling application to help reduce tool costs.



Use Two Types Of Insert For Different Applications

● **Choose A Tool To Suit Your Application From A Comprehensive Lineup**

DGC 13000R(S) Standard Pitch	DGCM 13000R(S) Fine Pitch	DGCF 13000R(S) Extra-Fine Pitch	DGC 13000EW Endmill Type

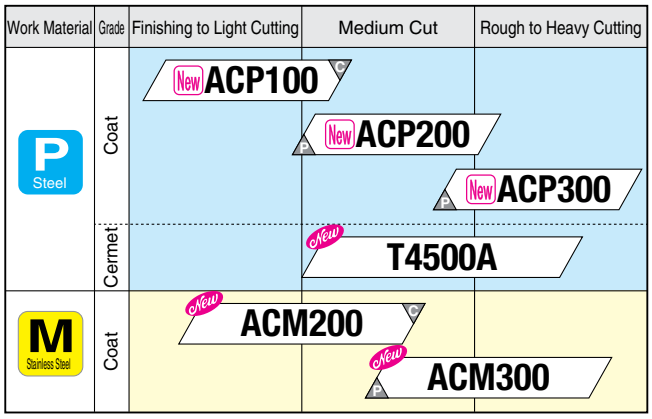
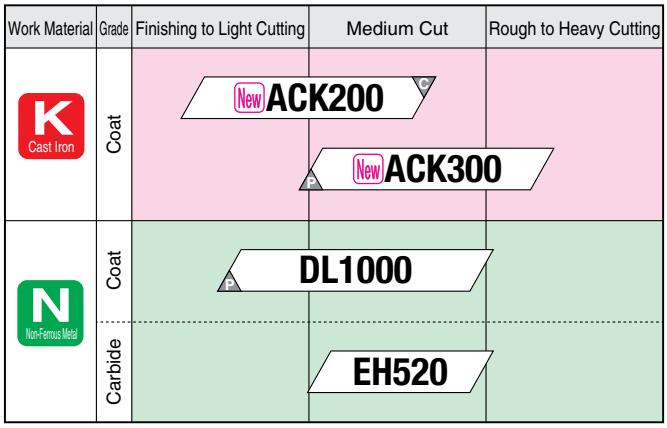
Mounting: Metric/Imperial	Mounting: Metric/Imperial	Mounting: Metric/Imperial	Mounting: Metric/Imperial

Application Range





The letters "C" and "P" at either end of each grade indicate coating type. C: CVD P: PVD Blank: Non-coated

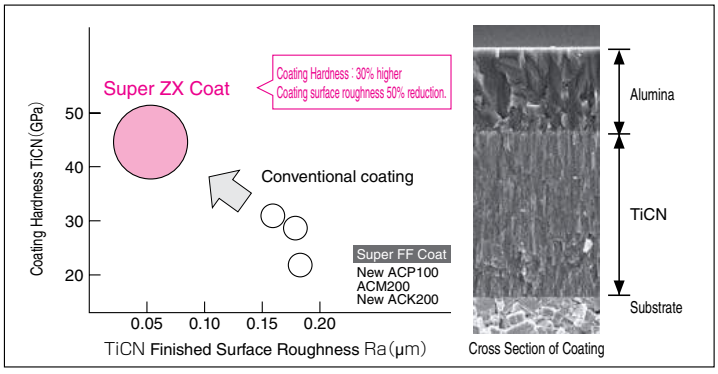
Features of Coating

Super ZX Coat (CVD : Chemical Vapor Deposition)

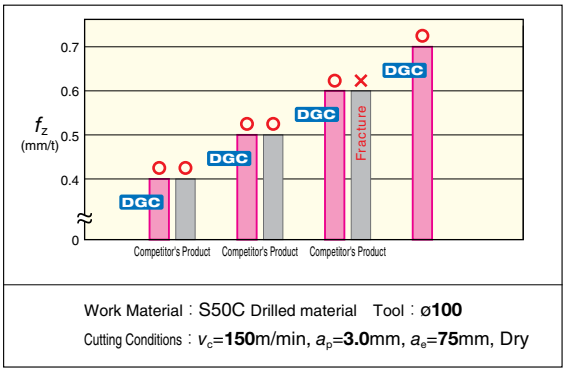
Provides excellent wear resistance and high reliability thanks to our coating stress control technology and the ultra-fine coating particles of the Super FF Coat achieved through our proprietary CVD process technology.

- ▶Achieves excellent chipping resistance thanks to the smoothness of the coating and our coating stress control technology.
- ▶High speed, high efficiency machining of more than 1.5 times that of conventional grades is possible by hardening the coating layer.
- ▶Achieves over 2 times longer tool life compared to conventional grades under the same cutting conditions.

Characteristics of films



Fracture Resistance



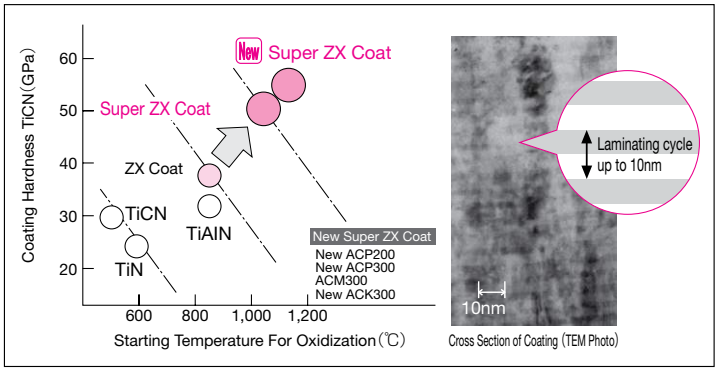
Work Material : S50C Drilled material Tool : ø100
Cutting Conditions : v_c=150m/min, a_p=3.0mm, a_e=75mm, Dry

NEW Super ZX Coat/Super ZX Coat (PVD : Physical Vapor Deposition)

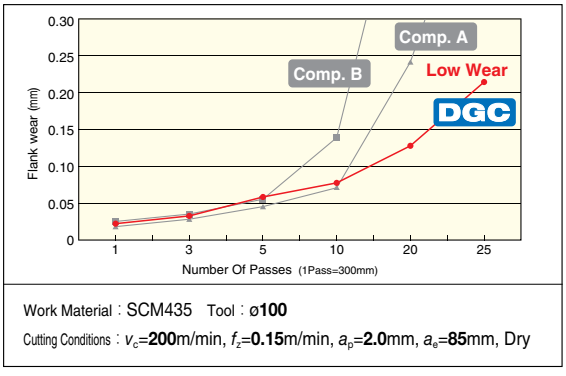
Employs our new Super ZX Coat, which utilizes our proprietary thin-layer coating technology and advanced nanotechnology. The coating consists of thousands of alternating, nanometer-level-thin (1 nanometer is 1 billionth of a meter) layers.

- ▶Achieves excellent chipping resistance thanks to the smoothness of the coating and our coating stress control technology.
- ▶High speed, high efficiency machining of more than 1.5 times that of conventional grades is possible by hardening the coating layer.
- ▶Achieves over 2 times longer tool life compared to conventional grades under the same cutting conditions.

Characteristics of films



Wear Resistance



Work Material : SCM435 Tool : ø100
Cutting Conditions : v_c=200m/min, f_z=0.15m/min, a_p=2.0mm, a_e=85mm, Dry

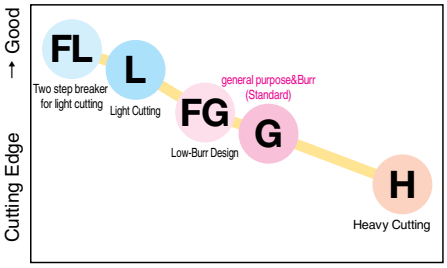
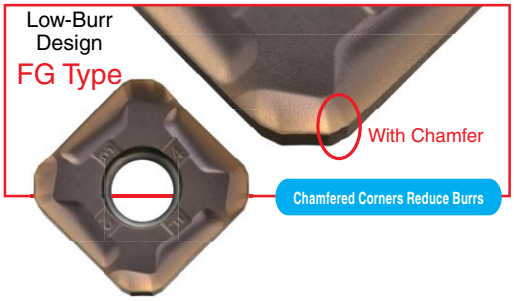
Chipbreaker Map

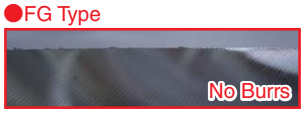


Improved Milling Quality

· FG type chipbreakers feature chamfer to minimize burrs and provide excellent milling quality.

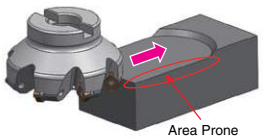


●FG Type



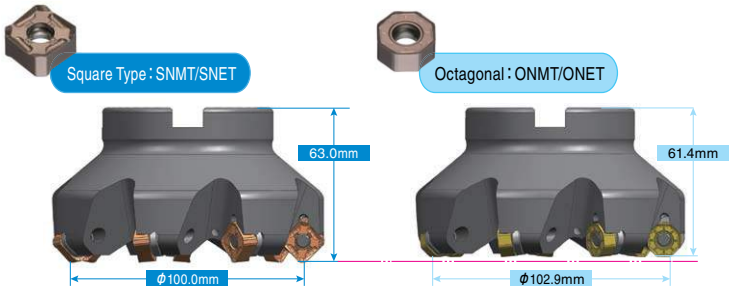
●Comp. A

FG type inserts with low-burr design enable high-quality milling with few burrs and little edge chipping.



Work Material : SCM435
Tool : φ100
Cutting Conditions : V_c=200m/min, f_z=0.2mm/t
a_p=3mm, a_e=85mm

Cutter Diameter And Cutting Edge Height

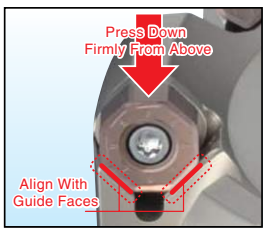


Note that while square inserts (SNMT) and octagonal inserts (ONMT) can be used interchangeably on the same body, they have different cutter diameters, cutting edge heights, and maximum cutting depths.

Body Shape (Example: With Cutter Diameter of 100mm)

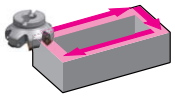
Insert	Cutter ϕD_c (mm)	Cutting Edge Height L_f (mm)	Max. Depth of Cut a_p (mm)
SNMT/SNET	100.0	63.0	6.0
ONMT/ONET	102.9	61.4	3.0

Attaching Octagonal Inserts



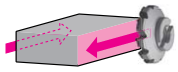
Firmly align insert with guide faces, press down in the direction of the arrow, and tighten the screw to fix the insert.

■ Application Examples



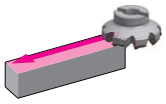
Part/Work Material		Automotive Component/Cast Steel	
Tool	Manufacturer	Sumitomo	Conventional Tool
	Body	DGCM13080R(ϕ80)	ϕ80
	Insert	SNMT13T6ANER-G (8 Corners)	Single-Sided (4 Corners)
	No. of Flutes	6	6
	Grade	ACP200	PVD Positive Type
Cutting Conditions	Cutting Speed(m/min)	160	160
	Feed (mm/t)	0.31	0.31
	Feed Rate (mm/min)	1,184	1,184
	Axial Cutting Depth(mm)	3	3
	Cutting Width(mm)	60	60
	No.of Workpieces	2	2
	Dry/Wet	Wet	Wet

Can be used under the same conditions as the single-sided inserts. Improves tool economy by doubling corners.



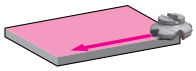
Part/Work Material		Machine Component/S50C	
Tool	Manufacturer	Sumitomo	Conventional Tool
	Body	DGCM13160R(ϕ160)	ϕ160
	Insert	SNMT13T6ANER-FG (8 Corners)	Single-Sided (8 Corners)
	No. of Flutes	10	10
	Grade	ACP200	PVD Positive Type
Cutting Conditions	Cutting Speed(m/min)	133	133
	Feed (mm/t)	0.132	0.132
	Feed Rate (mm/min)	350	350
	Axial Cutting Depth(mm)	2.5	2.5
	Cutting Time	287分	287分
	Dry/Wet	Dry	Dry

Reduces more burrs and achieves higher milling quality compared to conventional grades.



Part/Work Material		Machine Component/Cast Steel	
Tool	Manufacturer	Sumitomo	Conventional Tool
	Body	DGCM13125(ϕ125)	ϕ125
	Insert	ONMT05T6ANER-G (16 Corners)	Double-Sided (8 Corners)
	No. of Flutes	8	8
	Grade	ACP200	PVD Positive Type
Cutting Conditions	Cutting Speed(m/min)	160	160
	Feed (mm/t)	0.29	0.29
	Feed Rate (mm/min)	945	945
	Cutting Width(mm)	2.5	2.5
	Dry/Wet	Dry	Dry

Improves tool economy by doubling corners.



Part/Work Material		Automotive Component/Stainless Steel	
Tool	Manufacturer	Sumitomo	Conventional Tool
	Body	DGC13100R(ϕ100)	ϕ100
	Insert	SNET13T6ANER-G (8 Corners)	Single-Sided (4 Corners)
	No. of Flutes	5	5
	Grade	ACM300	PVD Positive Type
Cutting Conditions	Cutting Speed(m/min)	150	150
	Feed (mm/t)	0.15	0.15
	Feed Rate (mm/min)	360	360
	Axial Cutting Depth(mm)	2.0	2.0
	Dry/Wet	Wet	Wet

Doubles corners and provides over 3 times longer tool life per corner compared to conventional grades.

■ Recommended Cutting Conditions (SNMT/SNET)

ISO	Work Material	Hardness	Cutting Speed v_c(m/min) Min.-Optimum-Max.	Feed Rate f_z(mm/t) Min.-Optimum-Max.	Depth of Cut (mm)	Grade
P	General Steel	G	150-200-250	0.10-0.25-0.40	<4	ACP200 ACP300

DNX(F)/DNH,DNHS Type

High Efficiency Face Milling Cutters for Cast Iron and Cast Steel

■ Characteristics

- ●Achieves high efficiency milling with a max. 8 mm depth of cut!
- ●Employs negative inserts with chipbreakers that have a strong cutting edge on the double negative type body! Economical, uses 8 corners!
- ●Supports general to high-efficiency high feed milling with three body types! Inserts can be shared on all types!

Negative inserts with a rake angle achieve low cutting force and high feed milling!!

■ Series

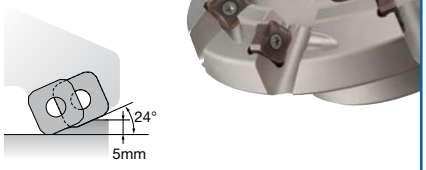
DNX(F) Type

General Purpose Type

Max. Depth of Cut		8mm
Approach Angle		65°
Cutter	DNX 12000R(S) General Purpose Type	ø80 to ø250mm
	DNXF 12000R(S) General Purpose Fine Pitch Type	ø80 to ø160mm

DNHS Type

Medium Depth of Cut High Feed Type



Max. Depth of Cut		5mm
Approach Angle		24°
Cutter	DNHS 12000R Medium Depth of Cut High Feed Type	ø80 to ø160mm

DNH Type

Small Depth of Cut High Feed Type

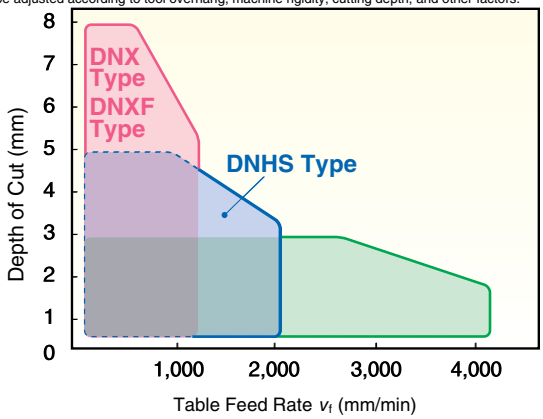
Max. Depth of Cut		3mm
Approach Angle		24°
Cutter	DNH 12000R Small Depth of Cut High Feed Type	ø80 to ø160mm

Large ◀ Depth of Cut — Feed Rate ▶ Large

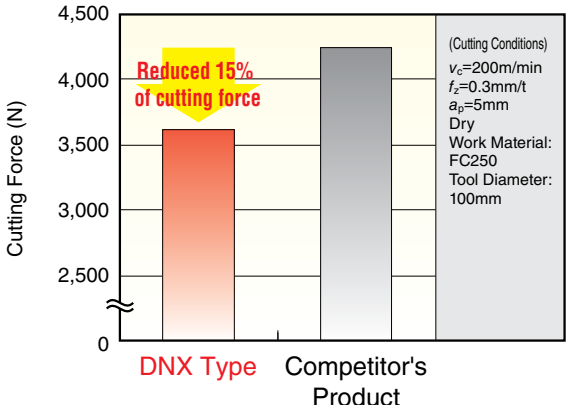
■ Application Range (Cast Iron)

Cut carbon steel at 20 to 30% reduction.

* The below conditions are provided as a general guide. Actual conditions will need to be adjusted according to tool overhang, machine rigidity, cutting depth, and other factors.



■ Performance Comparison



■ Recommended Cutting Conditions

DNX Type／DNXF Type

ISO	Work Material	Hardness	Cutting Speed v_c(m/min) Min.- **Optimum** -Max.	Feed Rate f_z(mm/t) Min.- **Optimum** -Max.	Grade
K	Cast Iron	250HB	150-**225**-300	0.10-**0.20**-0.30	ACK200 ACK300
	Ductile Cast Iron	250HB	150-**200**-250	0.10-**0.18**-0.25	ACK200 ACK300
P	Carbon Stee	180 to 280HB	150-**175**-200	0.10-**0.15**-0.20	ACP200
	Alloy Steel	180 to 280HB	150-**175**-200	0.10-**0.15**-0.20	ACP200

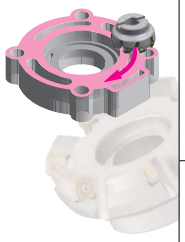
Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth, and other factors.

DNHS Type／DNH Type

ISO	Work Material	Hardness	Cutting Speed v_c(m/min) Min.- **Optimum** -Max.	Feed Rate f_z(mm/t) Min.- **Optimum** -Max.	Grade
K	Cast Iron	250HB	150-**225**-300	0.10-**0.55**-1.00	ACK200 ACK300
	Ductile Cast Iron	250HB	150-**200**-250	0.10-**0.55**-1.00	ACK200 ACK300
P	Carbon Stee	180 to 280HB	150-**175**-200	0.10-**0.45**-0.80	ACP200
	Alloy Steel	180 to 280HB	150-**175**-200	0.10-**0.35**-0.60	ACP200

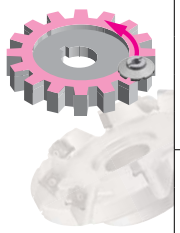
Note For the DNHS, insert heights are alternatively located, so the actual feed rate per tooth is doubled. Use with f_z=0. 5mm/t (actual feed rate 1.0 mm/t) as the upper limit. The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth, and other factors.

■ Application Examples



Part/Work Material		Automotive Component/FC250	
Used Equipment		Machining Centre (BT30)	
Tool	Manufacturer	Sumitomo	Conventional Tool
	Body	DNXF 12080R	General Purpose Cutter
	Inserts	G Type	Negative Insert
	Tool Diameter(mm)	80	80
	No. of Flutes	8	8
	Insert	ACK200	K Series CVD
Cutting Conditions	Cutting Speed (m/min)	200	200
	Feed (mm/t)	0.069 (v_f=420mm/min)	0.069 (v_f=420mm/min)
	Axial Cutting Depth (mm)	1.6	1.6
	Cutting Width (mm)	60	60
	Dry/Wet	Wet	Wet

2x longer tool life than conventional tools under the same conditions.



Part/Work Material		Construction Machine Component/Cast Steel	
Used Equipment		Machining Centre (BT50)	
Tool	Manufacturer	Sumitomo	Conventional Tool
	Body	DNHS 12100R	General Purpose Cutter
	Inserts	H Type	Negative Insert
	Tool Diameter(mm)	100	100
	No. of Flutes	8(4)*	7
	Insert	ACP200	P Series CVD
Cutting Conditions	Cutting Speed (m/min)	140	200
	Feed (mm/t)	0.25 (v_f=450mm/min)	0.095 (v_f=300mm/min)
	Axial Cutting Depth (mm)	3 to 4	3 to 4
	Cutting Width (mm)	50	50
	Dry/Wet	Dry	Dry

Compared to the conventional tool, 1.5x high efficiency milling is possible.

* ( ) indicates no. of effective teeth

Part/Work Material		Electrical Appliance Component/FC250	
Used Equipment		Machining Centre (BT50)	
Tool	Manufacturer	Sumitomo	Conventional Tool
	Body	DNXF 12100R	General Purpose Cutter

	Axial Cutting Depth (mm)	3.5	3.5
	Cutting Width (mm)	135	135
	Dry/Wet	Wet	Wet

1.5x longer tool life than conventional tools.

■ Important Notes About Wiper Inserts

- When attaching the wiper insert, attach it as shown in Fig 1. When attached as shown in Fig 2, the normal roughness cannot be obtained.
- Wiper inserts are single-cornered and double-sided.
- Refer to Technical Guidance page N17 in the General Catalogue for details about wiper inserts.
- Do not use with DNHS and DNH types.

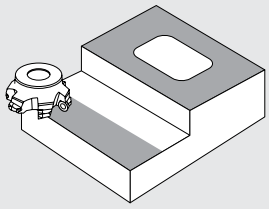
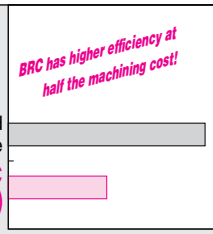
Application Examples





Tool:BRC12052R
Work Material:SNCM435 (Machine Component) 55 to 60HRC
Grade:BN350 v_C=250m/min f_Z=0.1mm/t a_p=0.5mm a_e=50mm

RSX Type

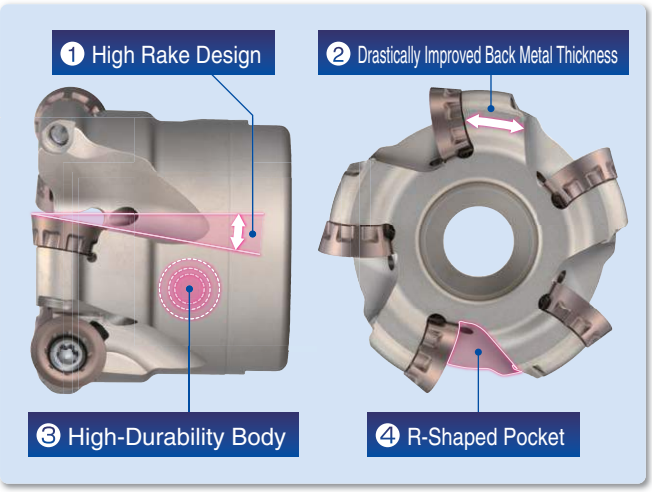
New

■ General Features

SEC-Wave Radius Mill RSX type is a radius cutter for exotic alloy machining that enables stable machining even when using equipment with low clamp rigidity thanks to its body design achieving excellent cutting performance and rigidity.
By employing the ACM Series for stainless steel and exotic alloy machining achieves long tool life in the machining of stainless steel, Inconel, etc. and drastically improves reliability in exotic alloy machining.

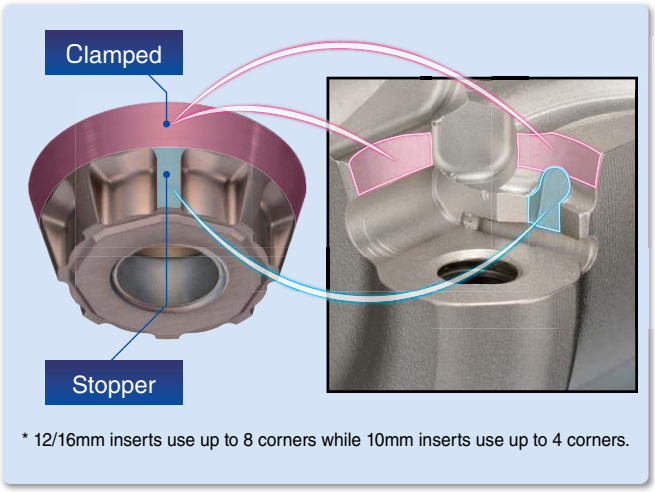
■ Low-Resistance, Low-Vibration Design

Achieves low-resistance, low-vibration machining thanks to ultra-high rake design and high-rigidity body design.



■ Excellent Operability

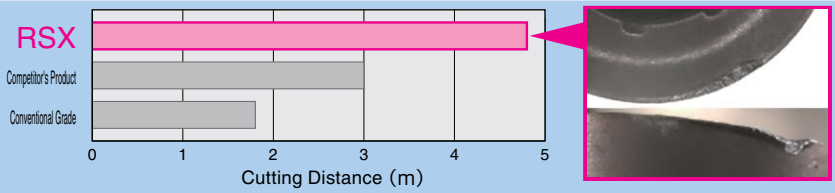
Enables easy corner management with high accuracy and operability by employing our proprietary positioning mechanism.



* 12/16mm inserts use up to 8 corners while 10mm inserts use up to 4 corners.

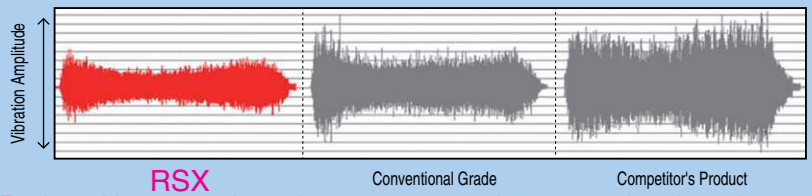
■ Performance

Tool Life Comparison (Fracture Resistance)



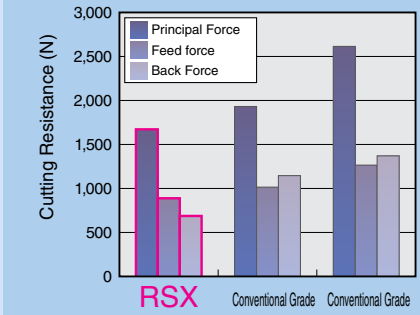
Achieves a tool life that is approximately 1.6 times longer than that of our competitors' products.

Cutting Vibration Comparison



Reduced by approximately 15% compared to competitors' products.

Cutting Resistance Comparison

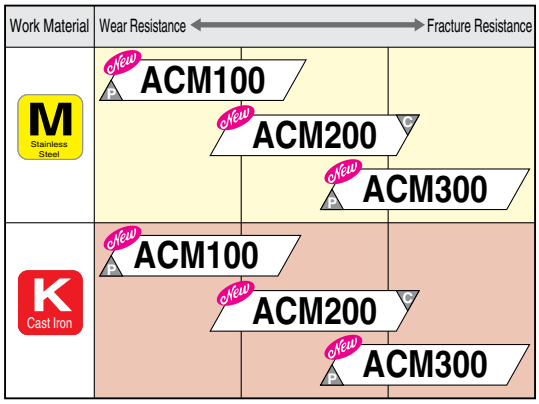


Work Material : SUS304 Tool : φ50
Cutting Conditions : V_c=200m/min, f_z=0.5mm/t
a_p=2.0mm, a_e=10.0mm Wet

RSX Type

■ Stable, Long Tool Life

Achieves long tool life and drastically improves reliability in exotic alloy machining by employing the ACM series, which is a grade for exotic alloy machining.

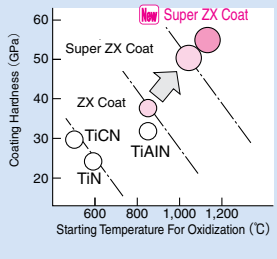


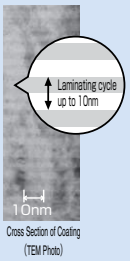
The letters "C" and "P" at either end of each grade indicate coating type.

▽: CVD △: PVD Blank: Non-coated

P ACM100/ACM300

NEW Super ZX Coat

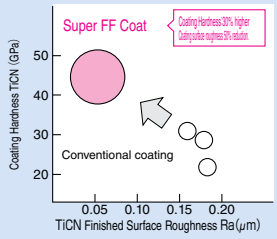


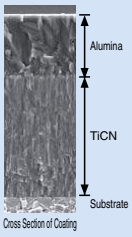


- Compared to conventional grades, the coating hardness has been increased by 40% and the oxidization starting temperature has been increased by 200°C.
- High speed, high efficiency machining of more than 1.5 times that of conventional grades is possible.
- Achieves over 2 times longer tool life compared to conventional grades under the same cutting conditions.

C ACM200

Super FF Coat





- Achieves excellent chipping resistance thanks to the smoothness of the coating and our coating stress control technology.
- High speed, high efficiency machining of more than 1.5 times that of conventional grades is possible. by hardening the coating layer.
- Achieves over 2 times longer tool life compared to conventional grades under the same cutting conditions.

■ Various Applications

Applicable to various types of machining such as carving, slant milling, and helical milling of dies.

WRCX Type

General Features

The popular WRC type has been redesigned.
The WRCX Type SEC WaveRadius Mill is a versatile, high efficiency cutter that is suited to carving dies, slant milling, helical milling, and a variety of other applications.
A full lineup of inserts allows it to handle a wide variety of work materials from steel to non-ferrous metals.

Characteristics

- Durable body with special surface treatment offers significantly improved tool life and reliability.
- Superb vibration resistance with anti-vibration edge design.
- All sizes come with coolant holes preventing chip build-up and jamming.
- Sturdy screw clamp with torx plus insert attachment ensures stable machining.

Series

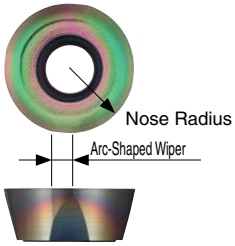
	Type	External (mm)	No. of Teeth
Shell Type	**WRCX(F) 12000R(S)**	ø40-ø80	4-6
	WRCX(F) 16000R(S)	ø63-ø100	3-6
H60	**WRCX 20000R(S)**	ø125-ø160	5-6
Endmill Type	**WRCX 08000E**	ø20-ø25	2-3
	WRCX 10000E	ø25-ø32	2-3
H63	**WRCX 16000E**	ø40-ø50	2-3
Modular Type	**WRCX 08000M**	ø20-ø25	2-3
	WRCX 10000M	ø25-ø32	2-3
H131	**WRCX 12000M**	ø40	4

Wide Insert Lineup

- In addition to conventional WRC type inserts, the new lineup includes non-ferrous metal inserts and surfing inserts.

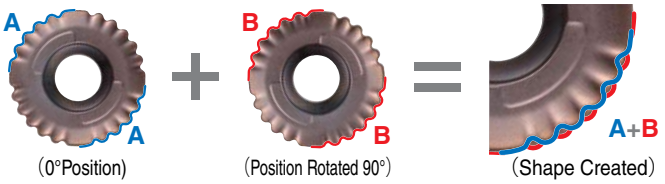
Non-Ferrous Metal Insert QPET ○○○○○○ PPFR-S

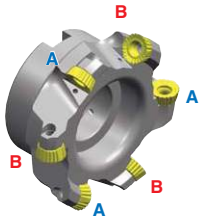
- Good surface roughness with arc-shaped wiper
- Sharp corners
- Four-cornered insert



Surfing Insert QPMT ○○○○○○ PPER-R

- Cutting edges feature unique rippled design
- Four-cornered insert
- *Use in combinations that alternate cutting edge A and cutting edge B.
  (Only useable on cutters with an even number of cutting edges)





Rotate 90°at a time and attach inserts

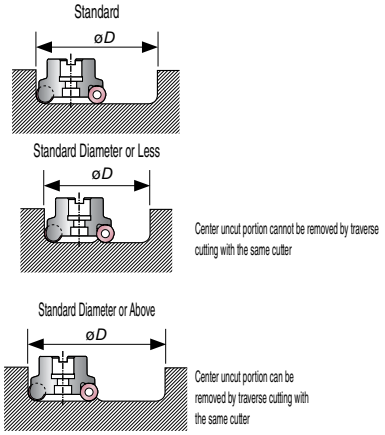
● Maximum Allowable Revolution Speed when Milling Non-Ferrous Metal (Units: min^{-1})

Cutter External Diameter $øD_C$(mm)	Insert Cat. No.		
	QPET10····-S	QPET12····-S	QPET16····-S
25	28,000		
32	25,000		
40		22,000	15,000
50		20,000	14,000
63		18,000	13,000
80		16,000	12,000
100			10,000

* Even if the speed used is within the maximum allowable revolution speeds listed above, abnormal vibrations may occur due to machine rigidity or other factors.
Therefore it is advisable to start operation at half the maximum allowable revolution speed and increase the speed gradually while checking for abnormalities.

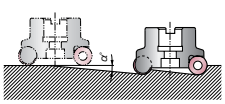
Usage Precautions

● Helical Milling



● Taper Milling

●Use at α°or lower.



● Recommended Values for Helical and Taper Milling

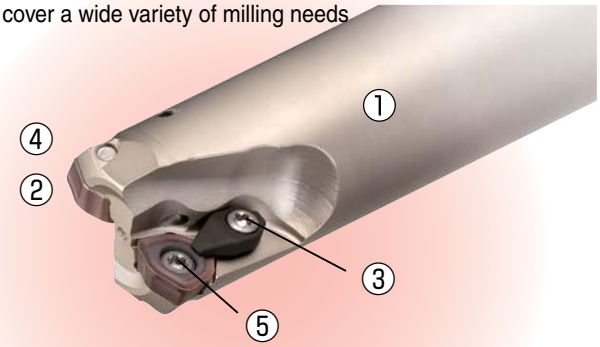
MSX Type

General Features

The SEC-Metal Slash Mill MSX Type is a multi-purpose cutter capable of roughing at ultra-high feeds. Its wide application range dramatically boosts efficiency. Inserts are available in four sizes, ranging from a ø16mm to the large diameter ø100mm model, to cover a wide variety of milling needs.



Characteristics

① **Highly Durable Body** Special surface treatment improves scratch resistance

② **Versatile Machining Operations** Use for ramping, helical, and drilling work

③ **Double Lock** Extra-strong clamping ensures stable cutting performance (Single clamp for ø22mm or thinner MSX06000 Type and MSX08000 Type)

④ **With oil hole** Improved chip evacuation with air or coolant supply hole and specially shaped pocket design

⑤ **Insert Shape** Unique tool shape packs cutting performance and cutting edge strength

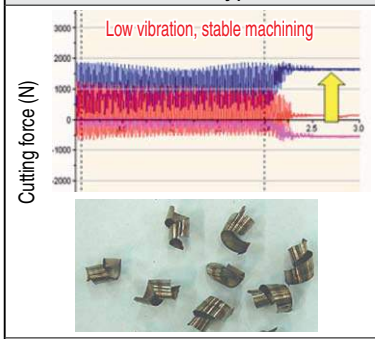
Insert Applications and Types

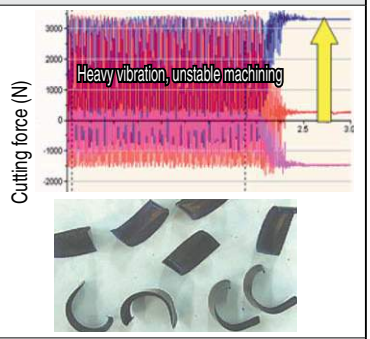
· Insert utilises a special cutting edge profile.
· Economical, three-cornered insert

Type	General Purpose Edge Type	Strong Edge Type
Application	General Turning (First choice)	Interrupted Cutting
Appearance/ Characteristics	 Sharper Edge	 Emphasis on Fracture Resistance

Cutting Performance

Cutting Force Comparison

MSX Type	Conventional Tool
	




Work material : S50C
Cutting Conditions : v_c=150m/min, f_z=1.0mm/t, a_e=25mm, a_p=2mm

Shoulder Milling Comparison of MSX Type and Conventional Tool

MSX Type	Conventional Tool
Performs under high working conditions 	Chatter-prone Cutting force is consistent, even when depth of cut is increased, for stable cutting performance.	Greater depth of cut increases contact length which increases cutting force.

· The above recommended cutting conditions may require adjustment according to machine rigidity and work rigidity. The above figures are guidelines for use with the BT50 machine tool.
· The above cutting conditions assume a tool overhang length of L/D=3 (i.e. overhang length is 3 times tool diameter) or less.
When tool overhang is more than L/D=3 and less than or equal L/D=5, settings should be adjusted to approximately 70 to 80% of those indicated in the above cutting conditions (i.e. a_p and f_z).
When tool overhang is more than L/D=5 and less than or equal L/D=8, settings should be adjusted to approximately 50 to 60% of those indicated in the above cutting conditions (i.e. a_p and f_z).

WMM Type

1 Cutter Body, 1 Insert Geometry, Multiple Applications.

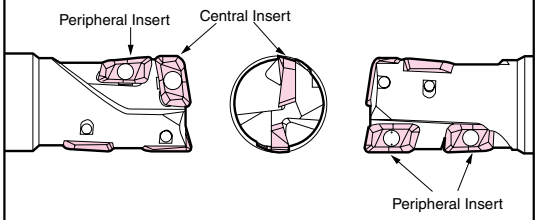
General Features

A single WaveMill performs a variety of operations such as grooving, shoulder milling, ramping, pocketing, drilling, helical cutting, etc., and eliminate the need to stock a variety of application specific tools.

Characteristics and Applications

- Multi-functional cutter efficiently performs a number of cutting operations
- Excellent for ramping, helical cutting and pocketing
- Uses standard inserts interchangeable with those used on other WaveMill cutters
- Strong high rake insert gives smooth cutting
- Easy to manage with one style of insert
- Best suited for Stainless Steel machining

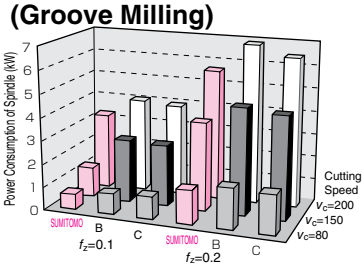
Insert Orientation of WMM Type Cutter



Product Range

Type	Description	Diameter (mm) ø20 – ø30 – ø40
2000E	Standard Type	20 – 30
2000EL	Long Type	20 – 30
2000ELH	Long Type w / Oil Hole	20 – 30
2000EXLH	Extra-Long Type w / Oil Hole	22 – 30
3000E	Standard Type	32 – 40
3000EL	Long Type	32 – 40
3000ELH	Long Type w / Oil Hole	32 – 40
3000EXLH	Extra-Long Type w / Oil Hole	35 – 40

Performance Comparison (Groove Milling)



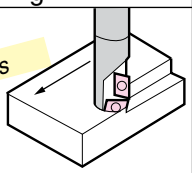
Diameter of Tool Used: ø25
Work Material: S50C
Cutting Conditions: v_c=80,150,200m/min、f_z=0.1,0.2mm/t
a_p=15mm、Overhanging Length of Tool=40mm

Application Examples Tool : WMM2025E

Shoulder Milling

SUS304

Cutting of stainless steel too!

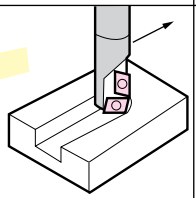


Tool Diameter: ø25 Insert: APMT103504PDER(ACZ350)
D.O.C. : a_p=25mm 、a_e=5mm
Cutting Speed:v_c=120m/min、Feed Rate: f_z=0.15mm/t
Air Blow

Grooving

FC250

Deep grooving can be performed easily. Easy chip removal

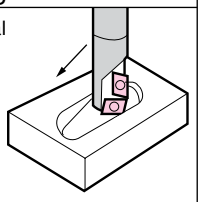


Tool Diameter: ø25 Insert: APMT103504PDER(ACZ310)
D.O.C.: a_p=15mm 、a_e=25mm
Cutting Speed: v_c=180m/min、Feed Rate:f_z=0.12mm/t
Air Blow

Taper Milling

S50C Block Material

Capable of tapered recess cutting of a prepared hole

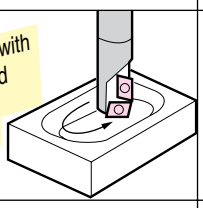


Tool Diameter: ø25 Insert: APMT103504PDER(ACZ350)
Cutting Width: a_e=25mm、Depth: a_p=15mm
Cutting Speed: v_c=200m/min、Feed Rate: f_z=0.1mm/t
Ramp Angle: P=15°
Air Blow

Pocketing

S50CBlock Material

Capable of pocketing with continuous lateral feed from initial drilling or taper milling process

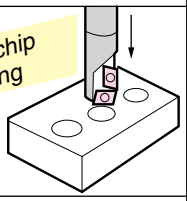


Tool Diameter: ø25 Insert: APMT103504PDER(ACZ350)
The following process was done in succession from a deep drilling process of 15mm depth.
D.O.C.: a_p=25mm, a_e=15mm
Cutting Speed: v_c=200m/min、Feed Rate: f_z=0.1mm/t
Air Blow

Drilling

S50CBlock Material

Capable of easy chip removal and drilling without tool damage

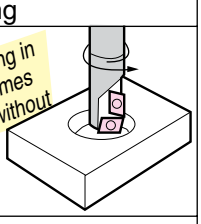


Tool Diameter: ø25 Insert: APMT103504PDER(ACZ350)
Hole Size: ø25mm、Depth: a_p=15mm
Cutting Speed: v_c=200m/min、Feed Rate: f=0.1mm/rev
Step-Feed: 0.5mm
Air Blow

Helical Milling

S50CBlock Material

Capable of large boring in diameter of 1.2-1.8 times the cutter diameter without prepared hole



Tool Diameter: ø25 Insert: APMT103504PDER(ACZ350)
Hole Size: ø40mm、Depth: a_p=20mm
Cutting Speed: v_c=300m/min、Feed Rate: f=0.1mm/rev
Axial Feed: 15mm/Pitch
Air Blow

PWS(F)/PWSR Type

■ General Features

Highly reliable shoulder milling cutter with tangentially mounted for never-before-possible high cutting edge strength and sharp cutting edges.

A 2-step insert array structure creates a new PWSR Type to meet the needs of deep cutting.

■ Characteristics

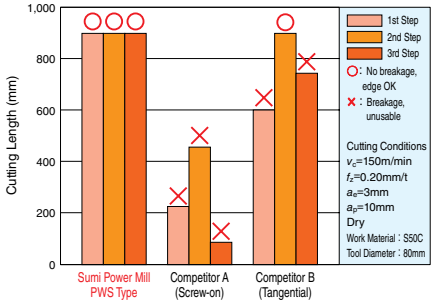
- Tangentially mounted inserts for outstanding cutting edge strength combined with optimised breaker for outstanding edge sharpness and cutting ability.
- Nicked insert design created with high-precision molding technology allows stable milling even in applications with large tool overhang.
- New ACP and ACK milling grades are used to meet the needs of various types of work material.

■ Performance

● Performance Comparison with General-purpose G-type Inserts

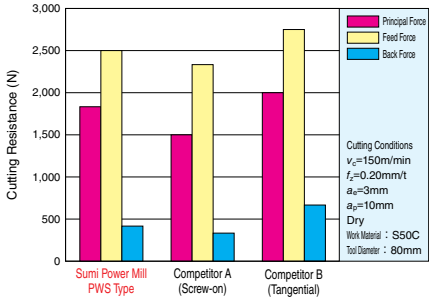
■ Cutting Edge Strength Comparison

High cutting edge strength for excellent stability!



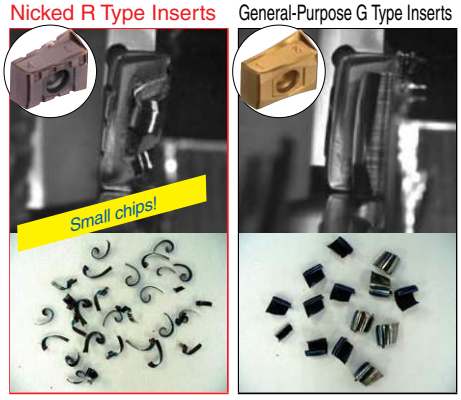
■ Comparison of Cutting Force

Cutting that is nearly the same as screw-on type!!



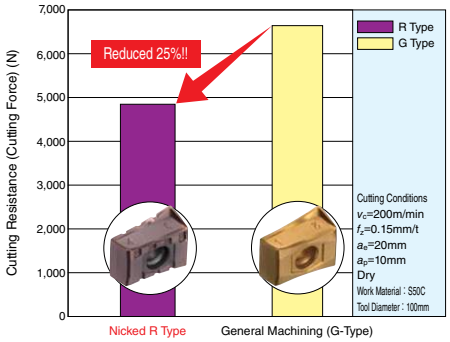
● Performance Comparison with Nicked R Type Inserts

Nicked R Type Inserts　General-Purpose G Type Inserts

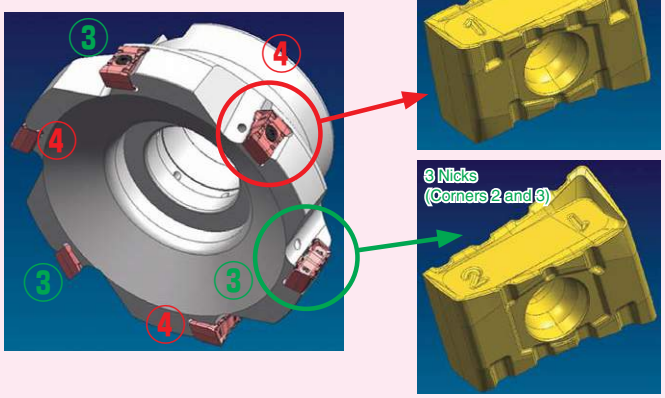


■ Comparison of Cutting Force

Reduced cutting power and excellent vibration resistance!



⚠ Cautions when Using Nicked R Type Inserts



1) Precautions During Installation

When using R type nicked indexable inserts, attach them so that the nicked grooves alternate as shown in the image to the left.

2) Cutting Condition Precautions

In order to attach as shown in the image to the left, the feed rate per tooth is double that when attaching the same-shaped inserts on all teeth. This means that adjustments should be made so the upper feed limit is as shown below.

f_z=0.25mm/t

Example: Use at f_z=0.2mm/t

Feed when all teeth are normal: 0.2mm/t

Feed when nicked: 0.4mm/t

Any incorrect use of inserts may damage tools.

SEC-Wave Mill

WFX Type

General Features

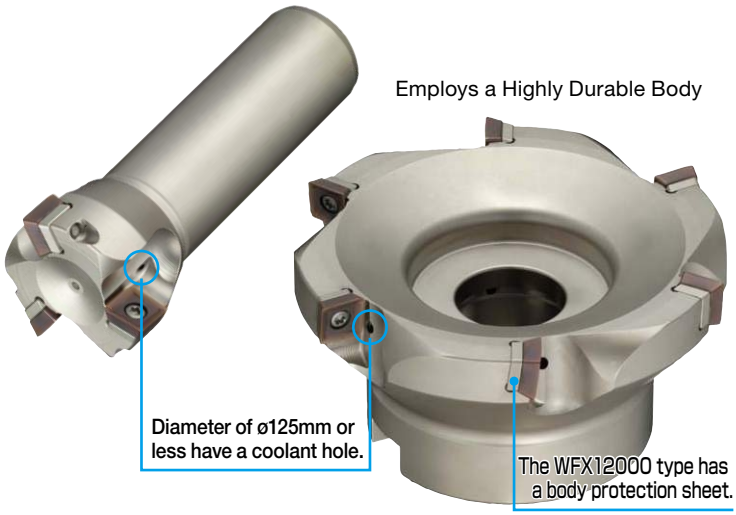
SEC-Wave Mill WFX type for shoulder milling is a screw-locking type cutter capable of using four corners.
Ideal cutting edge design delivers good squareness.

The WFX08000 type has also been added
(max. depth of cut: 6.0mm) for small-depth cutting.
Our wide lineup covers a wide variety of applications.

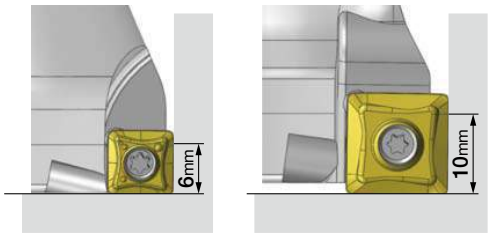
SEC-Wave Mill
WFXO 8000 Type

Characteristics

The insert shape optimized for shoulder milling combined with a high-precision body leaves a superior machined surface finish.



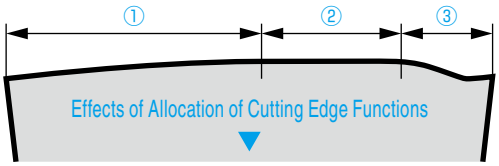
Max. depth of cut



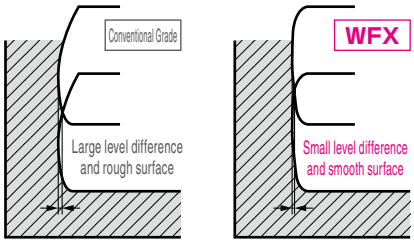
WFX08000 Type (Max.6mm)

WFX12000 Type (Max.10mm)

Optimized Edge Shape



① : The convex shape **ensures the cutting edge strength**.
② : The flat shape **reduces level differences** in carving.



③ : The wiper edge function **improves the surface roughness**.

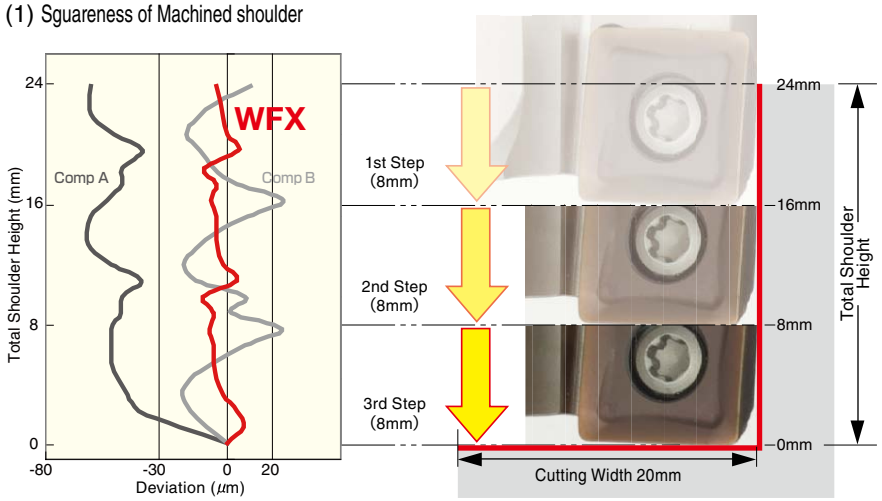
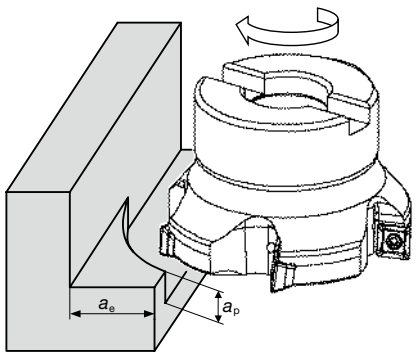
■ Performance

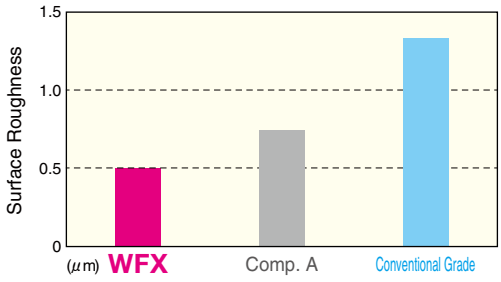
(1) Squareness of Machined shoulder





Work Material : **S50C** Tool : **WFX12100R** (ø100×5 flutes)
Cutting Conditions : v_c =**200**m/min, f_z =**0.15**mm/t,
a_p =**8.0**mm×**3** times, a_e=**20**mm

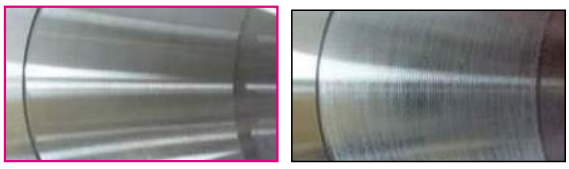
(2) Surface Roughness Comparison



Work Material : **SCM440** Tool : **WFX12100R** (ø100×5 flutes)
Cutting Conditions : v_c =**200**m/min, f_z=**0.10**mm/t,
a_p =**3.0**mm, a_e=**90**mm

(2) Comparison of Surface Properties

Work Material : **S50C**
Cutting Conditions : a_p =**0.5**mm

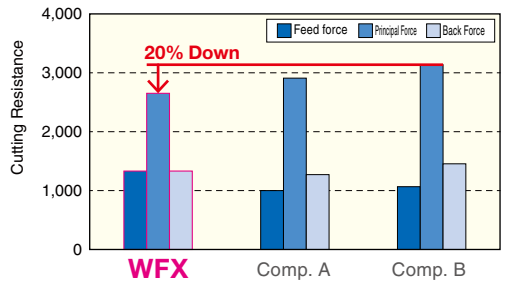


Glossy without Clouding　　Clouded without Gloss

Work Material : **SUS304**
Cutting Conditions : a_p =**0.5**mm

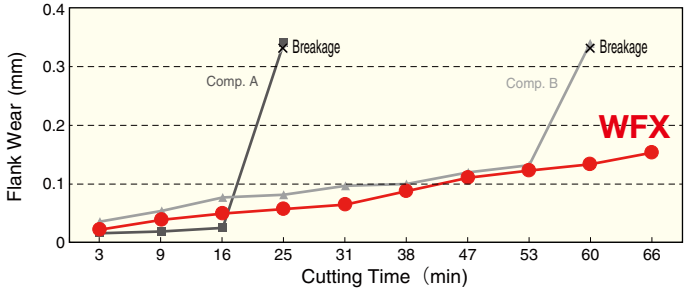
WFX　　Comp. A

(3) Cutting Resistance Comparison



Work Material : **S50C** Tool : **WFX12100R** (ø100×5 flutes)
Cutting Conditions : v_c =**200**m/min, f_z =**0.15**mm/t,
a_p =**10**mm, a_e=**20**mm

(4) Comparison of Wear Resistance



Work Material : **SCM440** Tool : **WFX12100R** (ø100 x 1 flutes)
Cutting Conditions : v_c =**200**m/min, f_z =**0.15**mm/t,
a_p =**5.0**mm, a_e=**30**mm

■ Application Examples

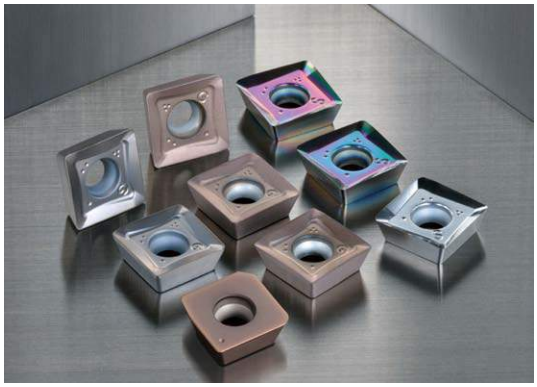
Work (S50C)		SEH Product	Conventional Grade
	Tool	**WFXF08063RS**	
	Grade	**ACP200**	
	Tool Diameter(mm)	ø63	ø63
	No. of Teeth	8	5
	v_c(mm/min)	220	220
	v_f(mm/min)	1,100	1,100
	f_z(mm/t)	0.15	0.20
	a_p(mm)	3.0	4.0
	a_e(mm)	50	50
	Coolant	Wet	Wet
	Results	• Vibration reduced by approximately 30%. • Good machined surface • Tool life is doubled.	

Work (FCD450)		SEH Product	Conventional Grade
	Tool	**WFXF12100R**	
	Grade	**ACK300**	
	Tool Diameter(mm)	ø100	ø100
	No. of Teeth	7	6
	v_c(m/min)	200	200
	v_f(mm/min)	446	382
	f_z(mm/t)	0.10	0.10
	a_p(mm)	0.05	0.05
	a_e(mm)	-	-
	Coolant	Dry	Dry
	Results	• Good Surface Roughness Ra 0.98 → 0.38μm, Rz 7.63 → 3.34μm • Cutting time is shortened. Insert life is extended by approximately 20%.	

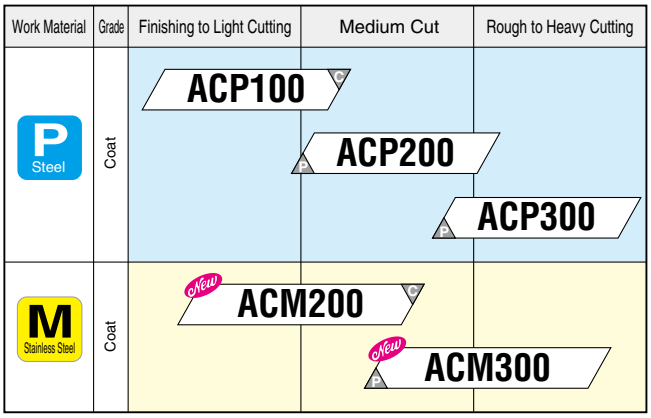
WFX Type

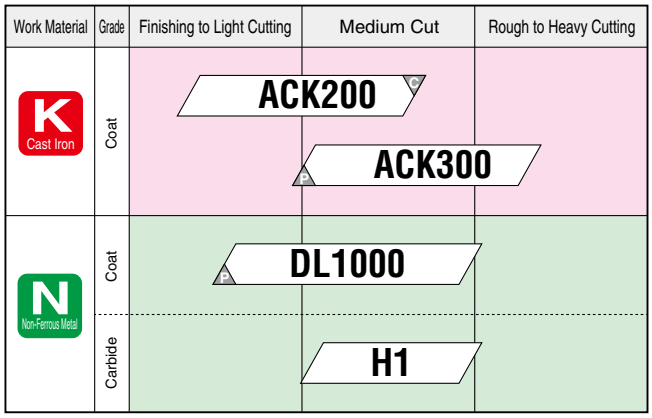
Insert Grades

The WFX type offers the newly developed multi-layer PVD coating structure New Super ZX Coat on these grades: New ACP200, New ACP300, and New ACK300. With excellent resistance against wear, fracture, and adhesion, the grades achieve 1.5 times longer tool life than conventional coating.
In addition to the DL1000 and H1 for non-ferrous metals and T4500A, a new cermet grade for milling, we have released the ACM200 and ACM300 grades for stainless steel and exotic alloys, thereby covering a wide range of work materials.



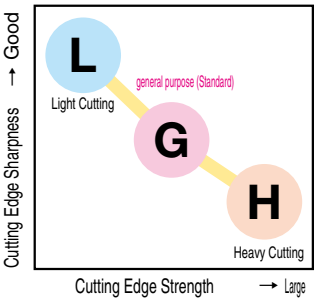
Grade Selection





The letters "C" and "P" at either end of each grade indicate coating type. ▽ : CVD △ : PVD Blank: Non-coated

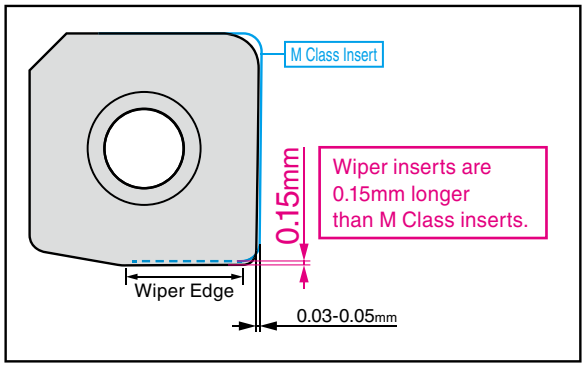
Chipbreaker Selection

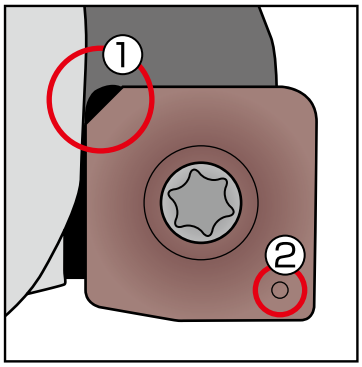


Work Material	P Steel K Cast Iron				N Aluminium
Breaker	L Type	G Type	H Type	Wiper Insert	S Type
Characteristic	Low Cutting Force	General Purpose	Strong Edge	Wiper Edge	Sharp Edge
Cutting Edge Figure	20°	15°	10°	15°	25°
Application	Light Cutting, Low Rigidity Milling Low-Burr Design	**Main Chipbreaker** General - Interrupted Milling	Heavy Cut, Heavy Interrupted Machining Hardened steel	Precision Finishing	Non-Ferrous Metal

Wiper Insert

Optimised wiper edge shape provides superior surface roughness.





Important Notes About Wiper Inserts

- Wiper inserts are single-cornered.
- Attach the wiper insert so that the chamfered corner is in location 1 shown in the figure.
- Be sure to use the corner with an ID mark (2 in the figure). (08-size inserts have no marks.)
- Refer to page N17 for details about wiper inserts.

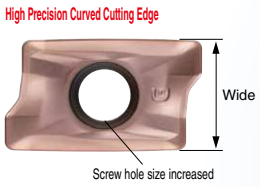
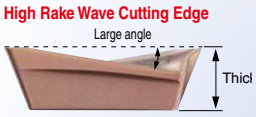
ø63	0°15'	0°20'
ø80		0°15'
From ø100		Impossible

■ Characteristics

Precision Insert with Strong Cutting Edge and Low Cutting Force Design

- Unique curved cutting edge design lowers cutting force yet improves cutting edge strength.
- Achieving high quality finish with high precision cutting edge
- Smooth cutting even for deep grooves and low rigidity machines.





Wide Variety of Inserts

- 6 types of chipbreakers. (L, G, H, E, EH, S Types)
- 7 new milling grades available for a wide range of work materials.

(Steel Milling Grades)
ACP100,ACP200,ACP300
(Cast Iron Milling Grades)
ACK200,ACK300
(Stainless Steel・Exotic Alloy+Gradet)
ACM200 New, ACM300 New
(Aluminium Milling Grades)
DL1000,H1

Highly Durable Body

- Special surface treatment improves corrosion resistance and scratch resistance.
- Increased screw size improves clamping force and durability.
- Improved chip evacuation with air or coolant supply.

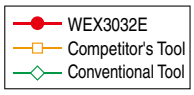
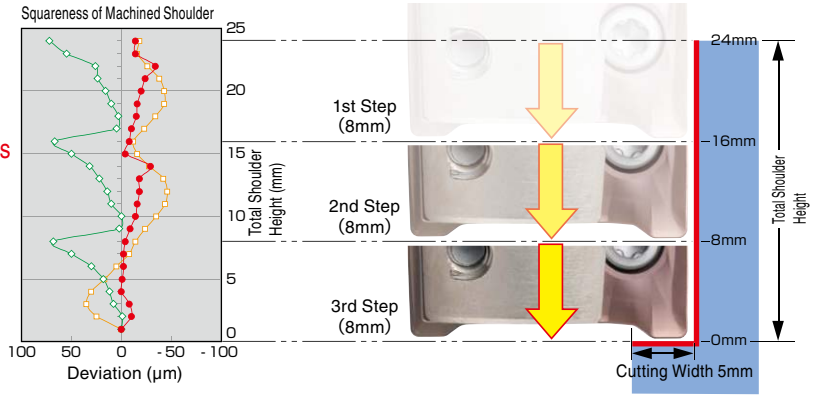
■ Cutting Performance

(1) Shoulder milling with better squareness

High accuracy cutting edges provide very small step marks
(Less than half of competitor's)

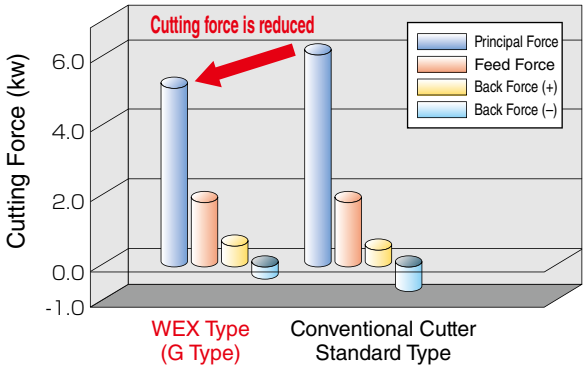




(Cutting Conditions)
Work Material : SS400
Tool : WEX3032E(ø32)
Insert : AXMT170508PEER-G
Grade : ACP200
Cutting Speed : V_c=150m/min
Feed Rate : f_z=0.15mm/t (v_f=675mm/min)
Cutting Width : a_e=5mm
Cutting Depth : a_p=8mm×3 Passes Dry

(2) Cutting Force

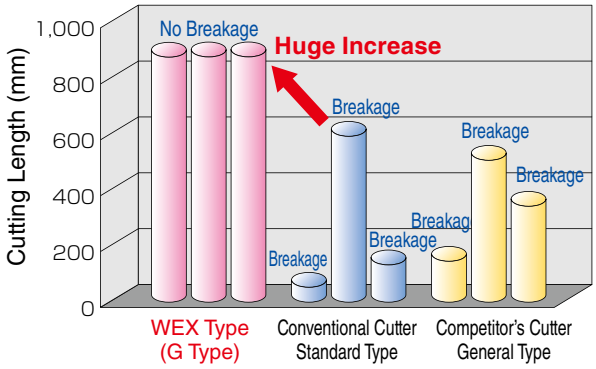
Cutting resistance (main component) is approx 15% lower than conventional cutters.



(Cutting Conditions)
Work Material : S50
Tool : WEX3032E(ø32)
Insert : AXMT170508PEER-G
Grade : ACP200
Cutting Speed : V_c=100m/min
Feed Rate : f_z=0.2mm/t (v_f=1,200mm/min)
Cutting Width : a_e=8mm
Cutting Depth : a_p=10mm Dry

(3) Fracture Resistance

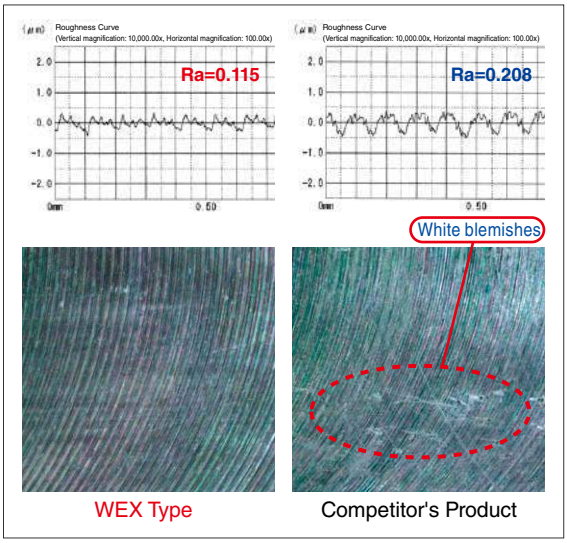
Huge increase in fracture resistance with improved cutting edge strength.



(Cutting Conditions)
Work Material : SCM440
Tool : WEX3032E(ø32)
Insert : AXMT170508PEER-G
Grade : ACP200
Cutting Speed : V_c=100m/min
Feed Rate : f_z=0.4mm/t (v_f=1,260mm/min)
Cutting Width : a_e=25mm
Cutting Depth : a_p=3mm Dry

(4) Surface Finish (Aluminum Milling)

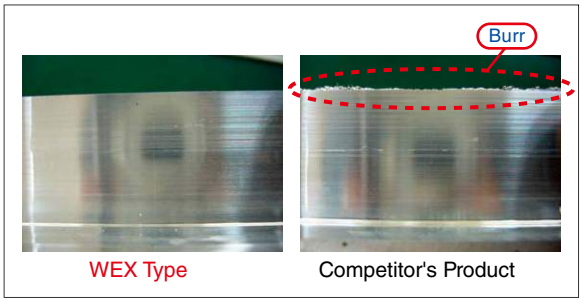
Smooth surface free of white blemishes



(Cutting Conditions)
Work Material : A5052
Tool : WEX3032E(ø32)
Insert : AXET170504PEFR-S(H1)
Cutting Speed : V_c=800m/min
Feed Rate : f_z=0.1mm/t (v_f=2,400mm/min)
Cutting Width : a_e=16mm
Cutting Depth : a_p=10mm Dry

(5) Burr on Machined Shoulder (Aluminum Milling)

High rake edge type significantly reduces burr.



(Cutting Conditions)
Work Material : A5052
Tool : WEX3032E(ø32)
Insert : AXET170504PEFR-S(H1)
Cutting Speed : V_c=800m/min
Feed Rate : f_z=0.1mm/t (v_f=2,400mm/min)
Cutting Width : a_e=5mm
Cutting Depth : a_p=12mm Dry

Stainless Steel・Exotic Alloy+Breaker E/EH Type

■ Characteristics of E/EH Type Chipbreaker

① Improved Adhesion Resistance
Smooth cutting edge design allows smooth chip flow

② Improved Cutting Performance
Strong cutting edge realized by optimizing edge treatment and rake angle

● The recommended cutting conditions may not be practical under certain operating conditions (i.e., machine, work shape, clamping system).
● For groove milling, adjust feed rate to around 70% of the above values.

Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth, and other factors.

	Copper Alloy			S																						350	330	300

● The recommended cutting conditions may not be practical under certain operating conditions (i.e., machine, work shape, clamping system).
● For groove milling, adjust feed rate to around 70% of the above values.

Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth, and other factors.

WRX Type

High Efficiency Shoulder Milling of Deep Steps

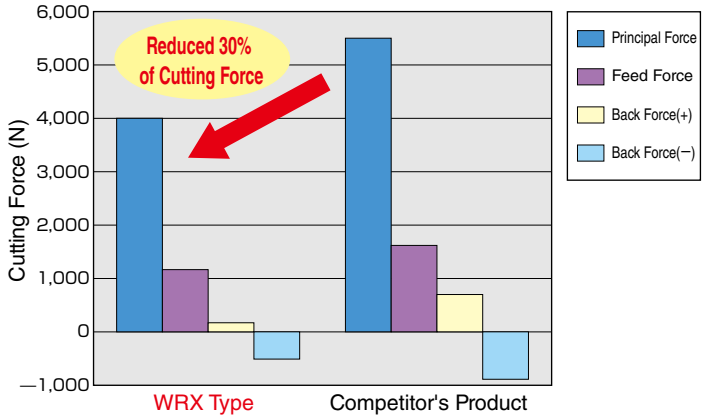
■ General Features

The SEC-WaveRepeater WRX type is an endmill that features cutting edges arranged in a wave-like configuration. Its long cutting edges are arranged in multiple stages to enable high efficiency shoulder milling of deep steps.

■ Characteristics

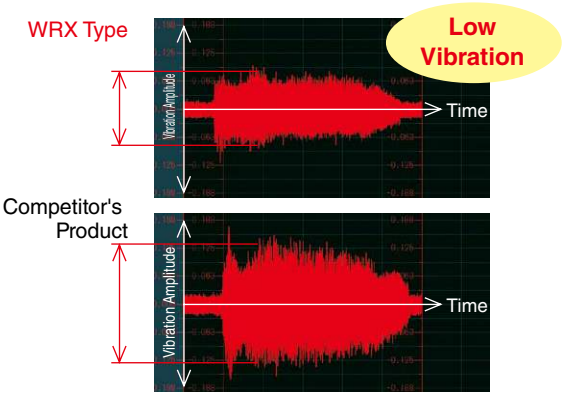
● Cutting edge positions are optimised to provide low cutting resistance and low vibration.

■ Cutting Force Comparison



(Cutting Conditions)
Work Material: S50C
Tool: WRX2025E2725
Cutting Speed: v_c=100m/min f_z=0.15mm/t a_e=10mm a_p=25mm Dry

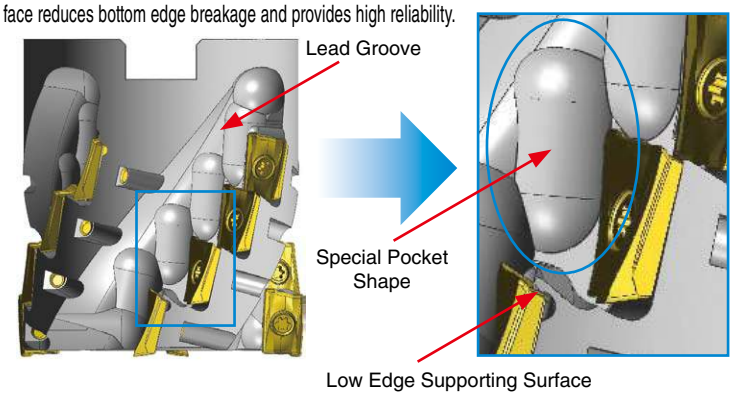
■ Vibration Comparison



(Cutting Conditions)
Work Material: S50C
Tool: WRX3080RS5332
Cutting Speed: v_c=150m/min f_z=0.20mm/t a_e=5mm a_p=40mm Dry

● Lead groove and special pocket shape provide smooth chip evacuation and high body rigidity.

● Low edge supporting face reduces bottom edge breakage and provides high reliability.



■ Product Range

Cutting Edge	Series Code	Cutting Edge Length (mm)	Cutter Diameter (mm)	Shape	Applicable Insert (*)
Standard Type	WRX2000E	27to36	ø20toø40	Shank Type	AXMT1235 Type

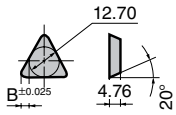

Fig 6 ACP/ACK Series Grades

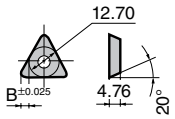

Type A

Type B

*TEEN43R can be made-to-order in grade DL1000.

· Upper side and wiper edge of H1 have mirrored finish.

· Some E class precision inserts have different shapes.

WBMR Type

General Features

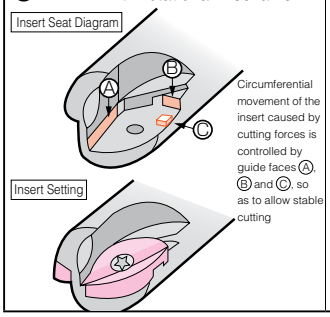
Indexable ballnose endmill series for 3-dimensional roughing to finish copy milling of die molds and machine parts.
Roughing series WBMR type is avaliable from ø20 to 50mm.
Finishing series WBMF type is avaliable from ø10 to 30mm.

3-D Rough Copy Milling

WBMR2000 Type / 2000L Type (ø20 to 50mm)

- Wave-shaped, high rake insert design that promotes a sharp cutting edge and low cutting force.
- Economical M-class insert with strong cutting edge.
- Stopper guides prevent insert from slipping during machining.
- Only one insert type required for large diameter cutters (ø40 and ø50), easier tool management.

● WBMR Anti-Rotational Mechanism

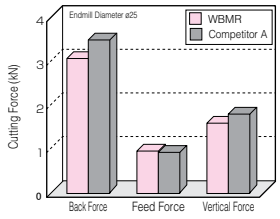


WBMR2000
(ø20 to ø50mm)

WBMR2000L
(ø20 to ø50mm)

Performance

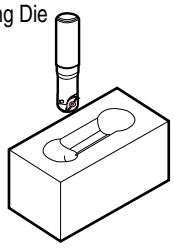
●Cutting Force



Work Material: S50C
Cutting Conditions
(Shoulder Milling, Down Cut)
v_c=200m/min
f_z=0.15mm/t
Axial Cutting Depth 5mm
Radial Cutting Depth 5mm

Application Examples

●Cold Molding Die
(SKD11)



<Evaluation>
Flank wear after continous cutting for seven hours was less than competitor's product. Stable cutting was observed.

WBMR2200S (ø20)
Grade ACZ350
Cutting Conditions
n=2200min^{-1}
v_f=500mm/min
D.O.C. 0.3 to 2mm
Non-water Soluble Cutting Oil

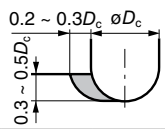
Anti-seizure cream SUMI-P included in the package.

Recommended Cutting Conditions

(A) Tip blade only

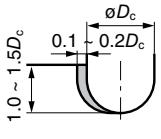
ISO	Work Material	Hardness	Cutting Speed v_c (m/min) Min. - **Optimum** - Max.	Feed Rate f_z (mm/t) Min. - **Optimum** - Max.	Grade
P	Low Carbon Steel	180 to 280HB	100-**150**-200	0.10-**0.20**-0.30	ACP200
	Alloy Steel	180 to 280HB	70-**100**-120	0.10-**0.20**-0.30	ACP200
M	Stainless Steel, Die Steel	—	50- **80** -100	0.10-**0.15**-0.20	ACP300
K	Cast Iron	250HB	100-**120**-150	0.20-**0.30**-0.40	ACK300



Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth, and other factors.

(B) Tip blade and peripheral blade

ISO	Work Material	Hardness	Cutting Speed v_c (m/min) Min. - **Optimum** - Max.	Feed Rate f_z (mm/t) Min. - **Optimum** - Max.	Grade
P	Low Carbon Steel	180 to 280HB	80-**120**-150	0.10-**0.20**-0.30	ACP200
	Alloy Steel	180 to 280HB	50- **80** -100	0.10-**0.20**-0.30	ACP200
M	Stainless Steel, Die Steel	—	40- **60** -80	0.10-**0.15**-0.20	ACP300
K	Cast Iron	250HB	80-**100**-120	0.20-**0.30**-0.40	ACK300



Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth, and other factors.

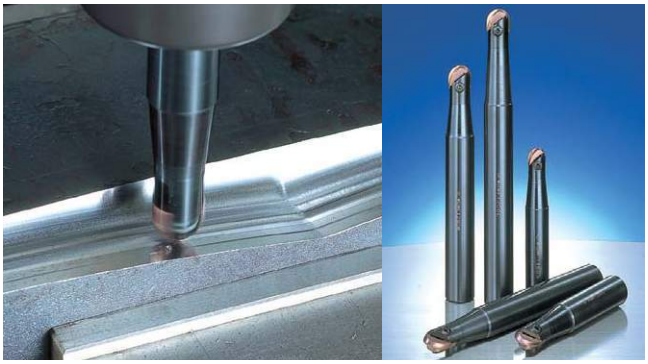
SEC-WaveBall

WBMF Type



General Features

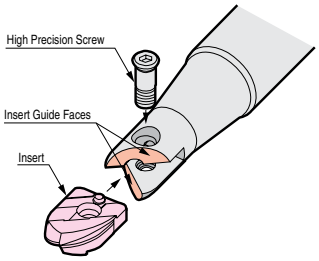
Indexable ballnose endmill series for 3-dimensional roughing to finish copy milling of die molds and machine parts. Roughing series WBMR type is avaliable from ø20 to 50mm. Finishing series WBMF type is avaliable from ø10 to 30mm.

3-D Finish Copy Milling

WBMF1000 Type (ø10 to 30mm)

- Simple but precise clamping design.
- Original large screw design.
- Sharp cutting edge that produces good finishing.
- Excellent wear resistance with Super ZX Coat.

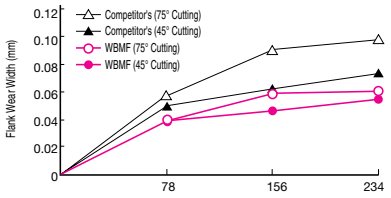
● WBMF Assembly



WBMF1000

Performance

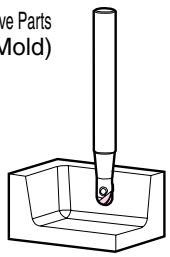
● Insert Life



<Results>
WBMF out-performs competitor's products inmost processes including plan profiling with better wear resistance.
Work Material: S50C
Process: Plan Profiling (45°, 75°)
Cutting Conditions
n=2,000min^{-1}
v_f=2,000mm/min
a_p=0.3mm
p_t=0.6mm
Dry

Application Examples

●Mold for Automotive Parts (Injection Mold)



<Evaluation>
Much better finishing as compared to competitor's, polishing time required is reduced by half.
WBMF1000 Type
Work Material: S55C
Process: Contouring
Cutting Conditions
n=2,500min^{-1}
v_f=800mm/min
a_p=0.7mm
Overhang=150mm
Wet

HF Type

■ General Features

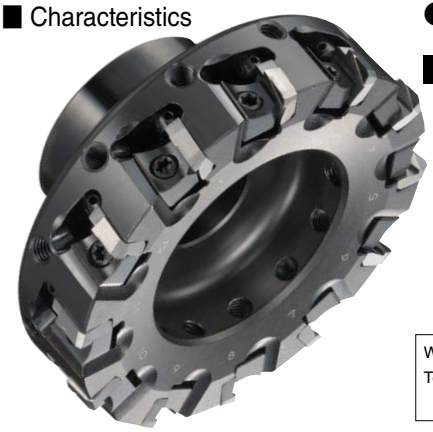
The HF Type high-efficiency aluminum cutter employs unique insert design to eliminate burrs and to achieve machining without burrs.

Work Material

- Aluminum and aluminum alloys
- Other non-ferrous metal

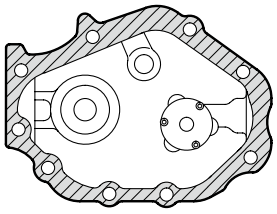
(Not suited for cast iron or steel.)

■ Characteristics

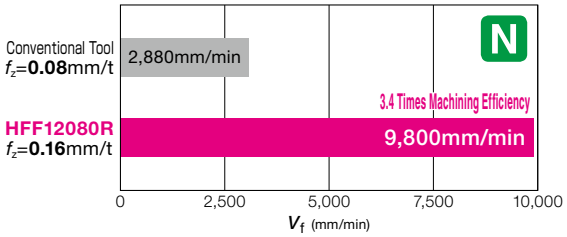


● Achieves high-efficiency milling with vf of over 20,000mm/min thanks to its multi-edge design (3 edges per inch).

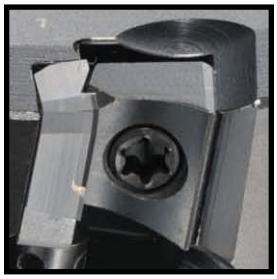
High Feed, High-efficiency Milling by Multi-edge Design



Work : Aluminum Case (Frame Milling)
Tool : **HFF12080R-25.4** (ø80 10 Flutes), Conventional (ø80 6 Flutes)



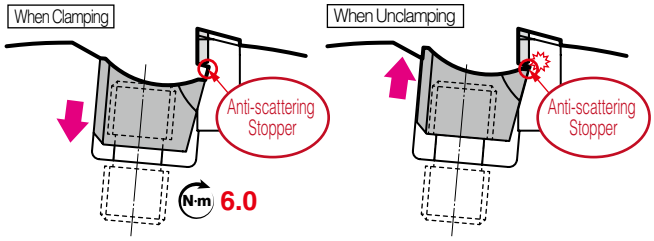
Cutter (mm)	s max (min⁻¹)	v_c (m/min)	f_z (mm/t)	Max. Number of Edges (Edge)	V_f (mm/min)
ø80	11,000	2,763	to 0.2	10	to 22,000
ø100	9,500	2,983	to 0.2	12	to 22,800
ø125	7,500	2,944	to 0.2	15	to 22,500

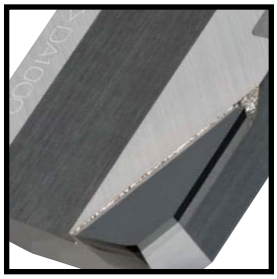


● The wedge clamp with anti-scattering mechanism ensures safety and operability.

Shape and structure to prevent scattering outside. Scattering by centrifugal force is prevented even when loosened by vibration.

Ensure that the maximum allowable spindle speed (s max) specified for each cutter diameter is not exceeded. Failing to do so is very dangerous. (*See the table on the upper right.)

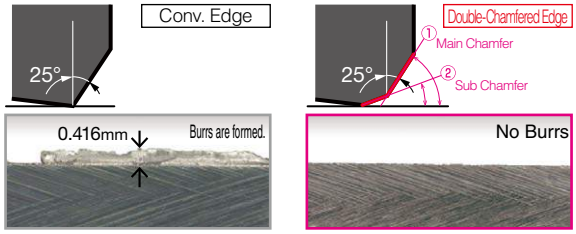




● Reduces burrs by using a double-chamfered cutting edge.

Drastically reduces burrs by preventing the plastic deformation that causes burrs.

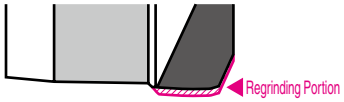
Work Material : **A6061** Blanks
Cutting Conditions : v_c=**3,142**m/min, f_z=**0.10**mm/t, a_p=**0.5**mm, Dry

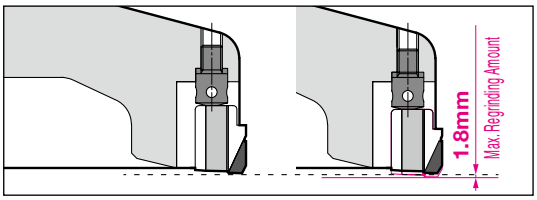


● Reduces running costs by drastically increasing the insert regrinding amount (to 1.8mm).

Assuming the amount of regrinding to be 0.2mm, an edge can be used up to 10 times.

(* Given the condition of normal wear with ap of 1.4mm or less)





The regrinding amount has been drastically increased compared to conventional screw-lock types.

● Achieves a run-out precision of 5μm or less by employing an easy fine-tuning mechanism.

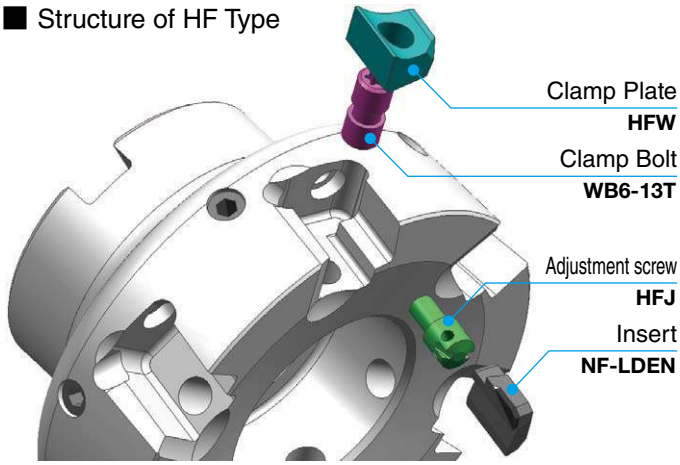
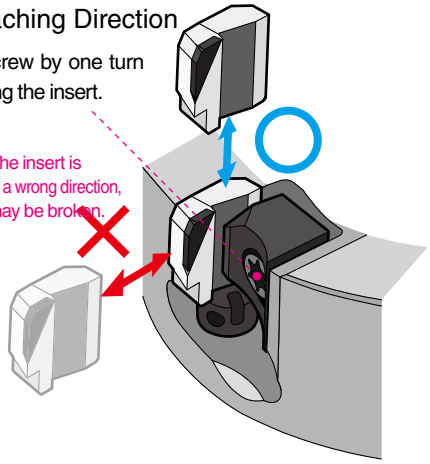
Structure of HF Type



Insert Attaching Direction

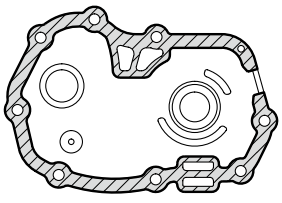
Loosen the screw by one turn before removing the insert.

⚠ Be aware that if the insert is forcibly removed in a wrong direction, the equipment may be broken.



Application Examples

● Work : Crankcase Cover		SEH Product	Competitor's Product
Work Material : **Al**	Tool	**HFF12080R**	ø80
	Grade	**DA1000**	PCD
	No. of Teeth	10	8
	V_c (m/min)	2,510	2,510
	S (min^{-1})	10,000	10,000
	V_f (mm/min)	8,000	6,400
	f_z (mm/t)	0.08	0.08
	a_p (mm)	1.2	1.2
	Coolant	Wet	Wet
	Results	Improves machining efficiency 1.25 times. Excellent surface roughness of Ra=1.0μm or less.	



● Work : Engine Component		SEH Product	Competitor's Product
Work Material : **Al**	Tool	**HFF12100R**	ø100
	Grade	**DA1000**	PCD
	No. of Teeth	12	8
	V_c (m/min)	2,000	2,000
	S (min^{-1})	6,370	6,370
	V_f (mm/min)	4,585	3,060
	f_z (mm/t)	0.06	0.06
	a_p (mm)	0.8	0.8
	Coolant	Wet	Wet
	Results	Improves machining efficiency 1.5 times. 1.5 times longer tool life (Increases the number of units machined from 3000 to 4000.)

RF Type

General Features

The RF type cutter has a special light weight Aluminium body, designed for high speed, high efficiency roughing to finish milling of Aluminium and other non-ferrous metals.

Work Material

- Aluminium and aluminium alloy
- Other non-ferrous metal

(Not suited for cast iron or steel)

Characteristics

- **From Roughing to Finishing Processes :** Roughing : Economical carbide insert / High-precision finishing with SUMIDIA
- **Strong and Light Cutter Body :** Special Aluminium body /40% lighter than steel cutters / Hard-anodized plated body / Improved efficiency in higher rotational speeds, lower spindle loads and shorter tool change time
- **Safe Design :** Anti-centrifugal force design to prevent inserts from dislodging from cutter (Speeds must be within max. recommended conditions) /Non-wedge design to prevent deformation
- **Easy Run-out Adjustment :** External setting gauge is used for easy tool presetting / High precision cutter construction, units fitted are within 10 μm even before setting

Application Examples

Work (Work Material)	Cutter Insert (Grade)	Cutting Conditions v_c = Cutting Speed (m/min) v_f = Feed Rate (mm/min) a_p = Depth of Cut (mm)	Results

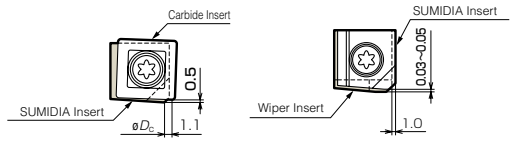
		—	200-**300**-400	0.05-**0.13**-0.20	H1

Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth, and other factors.

Insert Setup

For setting of Carbide inserts with SUMIDIA inserts/ blade

- Roughing and finishing in the same process
- When using wiper edge



CAUTIONS (For more details, refer to the instruction manual included with the product)

As it is possible to mix different types of inserts / blades, it is important to take note of the following.

- Do not mix reground and new inserts or even inserts with different regrinding amount on the same cutter.
- Carbide and SUMIDIA inserts must be arrange in an alternate manner.
- Ensure proper balancing by fixing SUMIDIA inserts of blades on opposite positions of the cutter.

SRF Type

General Features

Small diameter milling cutter SRF type is most suited for high-speed aluminium machining on small machines.

Characteristics

- **Best Suited For Small Machines**
  Especially reliable on BT30 class small machines.
- **From Roughing To Finishing Processes Utilising SUMIDIA DA1000**
  Insert with a side edge of 5mm.
- **Economical NF-type Inserts**
  NF-type SUMIDIA DA1000 inserts lower tooling costs.
- **High Speed Cutting With SUMIDIA**
  Maximum spindle speeds of up to n = 20,000min^{-1}
  (Actual spindle speeds must be set within the rotational limits of your machine and arbour.)
- **Simple design for insert run-out**
  Simple insert mounting design for easy yet precise tool adjustments.

Application Examples

Work (Work Material)	Cutter Insert (Grade)	Cutting Conditions n = Spindle Speed (min^{-1}) v_f = Feed Rate (mm/min) a_p = Depth of Cut (mm)	Results
Cam Case (ADC12)	SRF50R NF-SNEW09T3ADTR (DA1000)	n =6,000 v_f =2,400 a_p=0.5	12,000 pcs produced with no problems.
Computer Case (ADC12)	SRF50R NF-SNEW09T3ADTR (DA1000)	n =15,000 v_f =7,500 a_p=0.2	Improved efficiency of endmill operation by 2.5 times.
Differential Case (ADC12)	SRF63R NF-SNEW09T3ADTR (DA1000)	n =8,000 v_f =4,000 a_p=0.5	No obstructions on tool magazine when mounting ø63mm cutter on small machines.

Recommended Cutting Conditions

Si content of 13% or less.

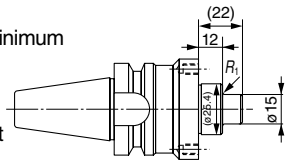
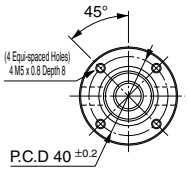
09T3ADTR-U	●	▲	6	Wiper
09T3ADTR-R	●	▲	7	Nose Radius

- Standard inserts and wiper inserts can be used on the same cutter body.
- Inserts with nose radius can reduce the clattering. These cannot be used with wiper inserts.
- Inserts can be reground 3 times (up to minimum IC diameter 9.225mm).
- Do not mix new and reground inserts, or even inserts with different regrind amount on the same cutter.
- When using reground inserts, it is advisable to re-confirm insert height and cutting diameter with a tool pre-setter.
- Arbour for SRF30R, SRF40RS





When using SRF30R and SRF40R cutters, there is a requirement to modify the arbour as shown above.
(1. Reduce part of the arbour's adaptor shaft from ø25.4mm to ø15mm.
2. Add 4 tap holes for (M5) cap screws.) Please use a hexagonal bolt M5 x 20 mm for securing the body.

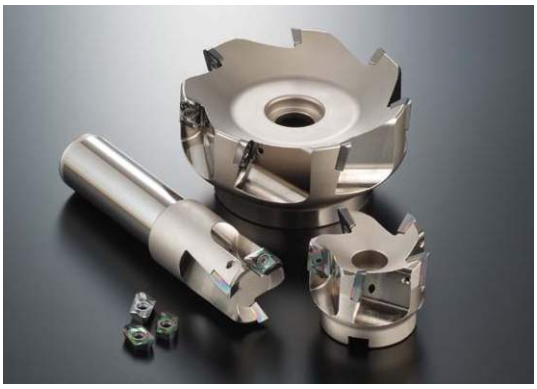
WAX Type



General Features

SEC-WaveMill WAX type is a high speed and high efficiency cutter capable of rough milling to finishing of Non-Ferrous Metals such as Aluminium alloy.

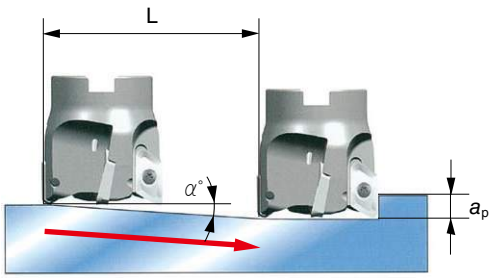
Characteristics

- For Ramping (Slant Milling)
- For Helical Milling
- Safety Design
  Prevents dislodging of inserts caused by centrifugal forces.
- Coolant Supply
  Coolant holes are a standard feature for the whole series.
- Excellent Adhesion Resistance
  - Top rake face of the insert is lapped finish.
  - DLC Coat inserts are available for improved adhesion resistance.

Ramping (Slant Milling)

Maximum ramping angle (α° max.) depends on cutter diameter.
Minimum milling length (L min) is the ramping distance required to reach the maximum cutting depth (a_p max) at the maximum ramping angle of that cutter.
Minimum milling length (L) for any depth can be calculated by the equation below:

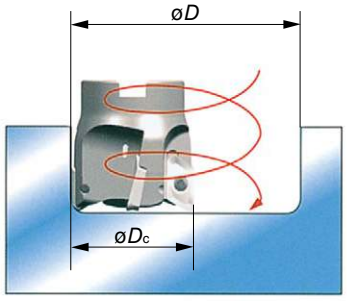
$$L = \frac{a_p}{\tan \alpha^\circ} \text{ (mm)}$$



Ramping (Slant Milling) Angles

Cutter Diameter øDc(mm)	Max. Ramping Angle α° max	
	WAX3000 Type	WAX4000 Type
20	28°	
25	17°	26°
32	12°	18°30'
40	9°	13°
50	7°	9°30'
63	5°	7°
80	3°	5°
100	3°	4°
125	2°	3°

Helical Milling



Helical Milling Diameter

Cutter Diameter øDc(mm)	WAX3000 Type		WAX4000 Type

High Speed and High Efficiency Milling for Cast Iron

- **High Speed, High Efficiency Milling of Grey Cast Iron**
  - Utilising solid SUMIBORON BNS800 for high speed cutting of v_c = 1,500m/min.
  - High speed roughing of up to d=3.0mm.
  - Wiper insert for high speed finishing.
- **Low Cost**
  - Cost effective 8 cornered inserts.
  - Insert regrinding possible.
- **Simple Design for Insert Run-out**
  - Direct insert mounting design.
  - Insert run-out can be easily adjusted.

SRFJ	TTX20	TH015	TH020

(N·m) Recommended Tightening Torque (N·m)

Recommended Cutting Conditions

ISO	Work Material	Hardness	Cutting Speed v_c (m/min) Min. - **Optimum** - Max.	Feed Rate f_z(mm/t) Min. - **Optimum** - Max.	Grade
K	Grey Cast Iron	250HB	800- **1150** -1500	0.05- **0.13** -0.20	BNS800 (Dry)

Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth, and other factors.

⚠ CAUTION

- Do not mix standard and wiper inserts on same cutter.
- Do not mix new and reground inserts on same cutter.
- Inserts can only be reground once (inscribed circle dimension must be at least 9.125mm)

For hardened steel machining use the SEC ACE Mill DNF Type.
